

MEASLES

MEASLES ARE ABOUT

Bury has had recent confirmed cases of measles. It is also common in many other countries that are common holiday destinations. **Measles is a highly contagious viral infection which can have serious consequences.**

Vaccinations are available

Catch-up clinics are running through July for anyone aged 1 to 18 who has missed a dose of the MMR vaccine for any reason.

Please scan the QR code for the dates and location of your nearest catch up clinic.

If you're not sure if your child has missed an MMR vaccine you can check with your GP practice. GP practices and the Bury GP Federation will also be contacting parents of children whose medical records show they've missed an MMR dose.

Vaccines without porcine gelatin are available. If you would prefer a vaccine without porcine gelatin please let the clinic know.

Adults who think they have missed an MMR dose can also arrange a catch up vaccination by speaking to their GP practice. It's never too late.
