

## Neurodevelopmental Pathway for Autism and ADHD

### Request for Neuro Assessment to Bury CAMHS

This is completed by your child or young person's School or GP

### Referral Paperwork

Family and your School will be asked to complete the Referral Paperwork. For Autism this is pre-referral document (2 terms) and developmental history, For ADHD - SNAPs, Checklist and developmental history

### Initial Assessment

Family and child or young person will be invited to Bury CAMHS to discuss their strengths and needs with one of our practitioners.

### Further clinical assessment

The young person will usually be asked to meet with one of our practitioners to complete further 1-1 assessment.

For Autism, your child/young person may be invited to an ADOS assessment, which will involve play and / or conversational-based activities. (see attached information)

For ADHD, your child/young person may be invited to a QB Test which is a computer base activity ( see attached information)

The Multidisciplinary Team will then review the information we have obtained to outcome your child or young person's Neuro assessment.

If we need further information, we will contact you advising of this. Once we have agreed an outcome, you will be invited to attend a feedback appointment and be provided with an assessment report and an onward referral made for post diagnostic support. The **Autism pathway ends here.**

For families and young people who wish to discuss / explore medication options following diagnosis of ADHD you are then placed on the psychiatry waiting list to see a medic.
