

Bury Strategic Housing Land Availability Assessment (2022)

Summary Report

Important Notice - Disclaimer

In relation to the information contained within this report (and any other report relating to the findings of Bury's Strategic Housing Land Availability Assessment - SHLAA), the Council makes the following disclaimer, without prejudice:

The identification of potential housing sites, buildings or areas within the SHLAA does not imply that the Council would necessarily grant planning permission for residential development. All planning applications incorporating residential development will continue to be treated against the appropriate development plan and material planning considerations. For example, some of the sites identified in the SHLAA are currently being used for employment purposes and any planning application to change the use of these sites to residential would be assessed against planning policy that seeks to protect employment land and other material planning considerations;

The inclusion of potential housing sites, buildings or areas within the study does not preclude them from being developed for other purposes. For example, many of the sites identified are still in employment use and the redevelopment of these for further employment use would generally be considered appropriate;

The boundaries that are attached to sites, buildings and areas are based on the information available at the time. The SHLAA does not limit an extension or contraction of these boundaries for the purposes of a planning application;

The exclusion of sites, buildings or areas from the study (either because they were never identified or are identified as 'constrained potential' or have been 'discounted') does not preclude the possibility of planning permission for residential development being granted on them or for these sites to be allocated. It is acknowledged that sites will continue to come forward (particularly small sites) that will be suitable for residential development that have not been specifically identified in the SHLAA;

The categorisation of sites in terms of when they may come forward (short, medium or long term) is based on information held at the base date of the study (1 April 2022). Circumstances or assumptions may change which may mean that sites could come forward sooner or later than originally envisaged. The SHLAA does not prevent planning applications being submitted on any sites identified or excluded within it at any time;

The information that accompanies the SHLAA is based on information that was available at the time of the study and there may be some omissions and/or factual inaccuracies which the Council does not take liability for. Therefore, users of the SHLAA findings will need to appreciate that there may be additional constraints on some sites that were not identified at the time of the survey and that planning applications will continue to be treated on their own merits at the time of the planning application rather than on the information contained within this assessment. Likewise, some of the identified constraints may have been removed since the information was compiled. Issues may arise during the course of a detailed planning application that could not / were not foreseen at the time of the study. For example, the SHLAA may identify a site as having no contamination but detailed ground investigations in the preparation of a planning application may reveal that it has. Applicants are therefore advised to carry out their own analysis of sites to identify any constraints or other information for the

purposes of a planning application and not rely solely on the findings of the SHLAA;

The capacity identified on the sites either relates to the numbers granted within a planning permission (where applicable) or is an estimate based on an appropriate density for the site in question. In arriving at these densities, Officers have taken into account locational and sustainability factors along with issues around local character and general views on the site. However, the capacities identified do not preclude densities being increased on sites, subject to details. Nor does it mean that the densities envisaged within the assessment would be appropriate and these would need to be assessed through the normal planning process when submitting a planning application.

The study has a base date of 1st April 2022 and the findings are only a 'snapshot' of information held at that time. Therefore, some of the information held on the database will be subject to change over time. For example, sites that are identified as not having planning permission may have secured permission since the information was compiled, whilst planning permissions may have lapsed on other sites. The Council intends to use the SHLAA as a 'living document' that will be continuously updated with a comprehensive overall update each year.

Please note that a correction was made to the totals in Table 11 of this report in January 2023 following the identification of an error.

1 Introduction

- 1.1 The National Planning Policy Framework (NPPF) sets out the national policy direction for the delivery of housing through the planning system. One key objective of the Government is to significantly boost the supply of homes. The NPPF requires strategic policies to make sufficient provision for housing development, looking ahead over a minimum of 15 years from adoption, and provide a clear strategy for bringing sufficient land forward, and at a sufficient rate, to address objectively assessed needs over the plan period. It seeks to make effective use of land by making as much use as possible of land that has been previously developed, including land and buildings that are vacant or derelict.
- 1.2 Paragraph 68 of the NPPF states that strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of a Strategic Housing Land Availability Assessment (SHLAA). From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.
- 1.3 The National Planning Practice Guidance (PPG) states that SHLAAs should provide an assessment of land which is suitable, available and achievable over the plan period. To meet this objective, authorities should identify specific sites and broad locations that will enable continuous delivery of housing over the Local Plan period. Local authorities are also required to identify specific deliverable sites to deliver sufficient housing to meet housing targets over a rolling five-year period.
- 1.4 SHLAA's are expected to form a key component of the evidence base to support the delivery of housing to meet adopted housing targets, which for Bury will be set through the Joint Places for Everyone Development Plan document (PfE).
- 1.5 It is important to note (as outlined in the disclaimer to this report) that whilst the SHLAA is an important evidence source to help inform the plan-making process, it will not in itself determine whether a site should be allocated for housing development or whether planning permission would be granted for residential development.
- 1.6 This summary report sets out how Bury's SHLAA has been carried out and presents the findings of the assessment.

2 Background

2.1 Bury's SHLAA will form part of the evidence base on the Borough's supply against local housing requirements. In line with the NPPG, SHLAAs should:

- Identify sites and broad locations with potential for development;
- Assess their development potential; and
- Assess their development potential and the likelihood of development coming forward (the availability and achievability).

2.2 The results of the SHLAA can then be used to:

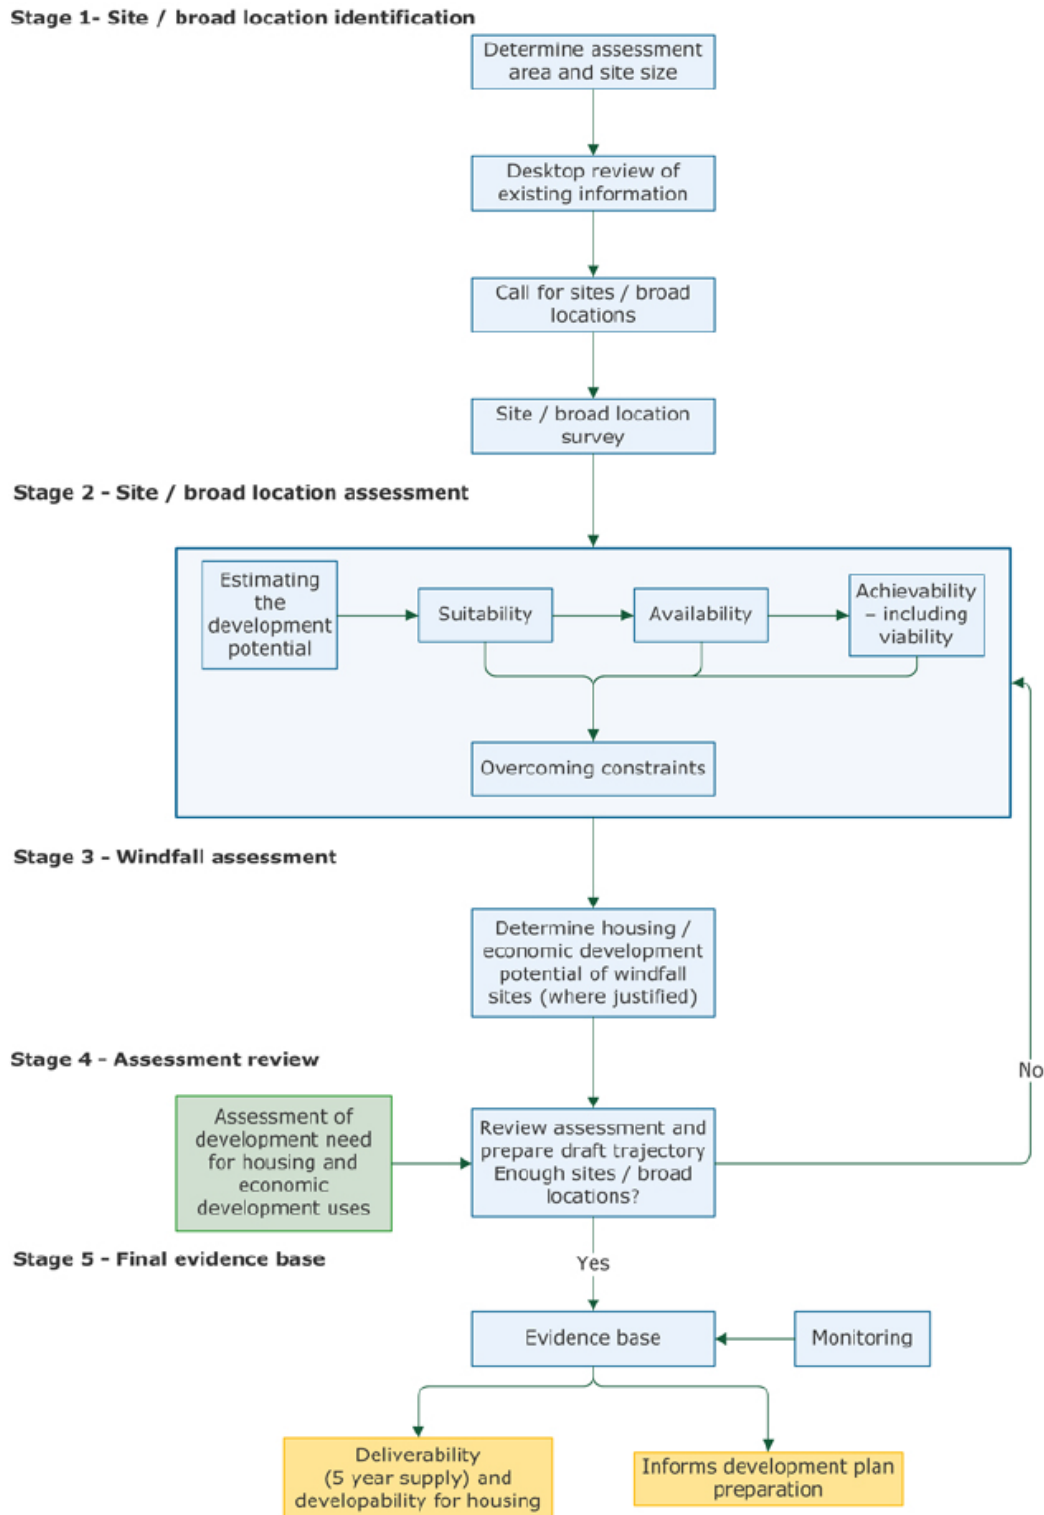

- help an authority to identify how much housing can be delivered within an area,;
- show whether or not housing targets can be delivered over the plan period (or at least in the short to medium term);
- demonstrate a continuous, flexible and responsive supply of housing can be provided;
- provide some comfort to the housebuilding industry about the suitability of sites with housing potential;
- provide an evidence base for the decision making process and help to inform other development plan documents, particularly the Site Allocations document; and
- help inform other initiatives and strategies that may be undertaken by the Council (e.g. Development Briefs).

2.3 The assessment has drawn upon a range of technical evidence sources that either had already been produced or were/are currently being undertaken to support the Local Plan.

3 Methodology

- 3.1 The National Planning Practice Guidance (PPG) sets out the methodology for the assessment of land availability as illustrated in Figure 1. The SHLAA has been carried out in line with this methodology.

Figure 1: Methodology – Flow Chart

Please note that the flowchart above is taken from the National Planning Practice Guidance (NPPG) and may not be suitable for users of assistive technology. Please see the link on the [NPPG webpage](#) to request an accessible format if required.

Stage 1 – Identification of Sites and Broad Locations

3.2 This stage is split into four areas as follows:

- A. Determine assessment area and site size;
- B. Desktop review of existing information;
- C. Call for sites/broad locations; and
- D. Site / broad location survey.

A. Determine Site Assessment Area and Site Size

- 3.3 The guidance advises that local authorities should consider the appropriate area for the assessment. It states that this should be the housing market area and functional economic market area. For Bury, this is considered to cover the whole of the Greater Manchester (GM) sub-region, which acts as a large collective housing market and provides a regional centre for the North West.
- 3.4 Bury Council works closely with its GM colleagues in planning terms. The possibility of carrying out a SHLAA with other local authorities in GM has already been discussed at the GM level under the previous guidance, which suggested a similar approach. However, this was not considered to be appropriate as the ten GM districts are at different timescales in terms of carrying out the work leading up to their individual Local Plans and often have different priorities. As such, the Council (as with the other nine 9 GM authorities) carry out their respective SHLAAs based on the local authority boundary.
- 3.5 Having said that, there is a general agreement that each district should undertake such assessments using the same methodology and collect specific information so that it can be used to monitor housing supply and issues within the sub-region. The Greater Manchester Combined Authority (GMCA) collates the results of the SHLAAs, which will be used for additional research and used as evidence across GM. This includes recent work on the proposed Greater Manchester Spatial Framework.
- 3.6 Therefore, whilst Bury's SHLAA is an assessment of potential sites within its own boundaries (as with other GM authorities), the results will be shared between the GM authorities to help determine the implications for the sub-region. Future work on SHLAA's may involve some joint-working within GM to help feed into strategic work on housing and other planning matters.
- 3.7 Bury's urban area is tightly constrained by the Green Belt and both the Council and the Government attaches great importance to Green Belt land. As such, the focus for previous SHLAAs has been within the urban area and this continues to be the case. Landowners and developers have put forward a significant number of sites outside of the urban area (including Green Belt) for development and these have been assessed in previous SHLAAs. The Council will continue to assess the suitability and achievability of all sites put forward regardless of the sites' location.
- 3.8 The NPPG suggests that SHLAAs should, at least, consider all sites and broad locations that have the opportunity to deliver five or more dwellings. Plan makers are allowed to consider other size thresholds where appropriate. As with previous SHLAAs, the Council does not impose a site size threshold as

part of the assessment either in terms of the number of units or area size. Where small sites are known (e.g. if they have planning permission or have been put forward) they have been included in the SHLAA.

- 3.9 However, smaller sites that have potential for housing development are difficult to identify, particularly on a site specific exercise (e.g. most large properties would have the potential to be subdivided into additional units and there is considerable scope to develop additional housing in garden areas). Therefore, as it is difficult to assess such sites the SHLAA makes an allowance for such sites coming forward on an annual basis. This allowance is a conservative one when assessed against the historical completion rate of such sites coming forward.

B. Desktop review of existing information

- 3.10 Previous SHLAAs have already been undertaken by the Council and this SHLAA is effectively an update of the last version. Much of the previous work can simply be rolled forward and updated without major modifications.
- 3.11 The findings of the SHLAA include an assessment of the following sources of sites that have potential for housing that are currently or have previously been identified through the planning process. Please note that the following sources relate to the position at 1 April 2022:
- Sites with an outstanding planning permission for residential development (or mixed-use with residential component) that are currently under construction;
 - Sites with an outstanding planning permission for residential development (or mixed-use with residential component) that are not under construction. This includes sites with either full or outline planning permission;
 - Sites that have been allocated for residential use in the Bury Unitary Development Plan, which do not benefit from an extant planning consent;
 - Sites and/or areas that have existing development briefs which include or have the potential to include an element of residential development;
 - Sites and/or areas that are allocated (or have planning permission) for employment or other land uses which are no longer considered suitable for that use. For example, the findings of the ELR has helped to identify employment sites that are potentially no longer suitable for employment use or may have longer term redevelopment opportunities, which may involve an element of residential use;
 - Sites that have benefited from planning permission previously but where the permission has lapsed; and
 - Sites that have previously been refused planning permission for residential use but where the reason for refusal is no longer applicable or where the principle was generally acceptable (e.g. sites that were refused planning permission due to the housing restrictions policy that is no longer in operation).
- 3.12 In addition, the results of the SHLAA includes an assessment of other sites that are not within the planning arena but where there may be potential for residential development. These include:
- vacant and derelict previously developed land and buildings;
 - vacant land not previously developed;

- underused land and buildings;
 - surplus public sector land; and
 - Land in non-residential use (e.g. car parks, commercial buildings).
- 3.13 The urban area of Bury is tightly constrained by the Green Belt boundary and this has restricted the ability of the Borough to deliver housing. A large number of Green Belt sites are included in the SHLAA assessment as they have been put forward as possible sites/areas for development. This includes sites that were proposed to be released from the Green Belt in the Draft Greater Manchester Spatial Framework (although the proposed release of these or any other Green Belt sites will need to be tested at public examination).
- 3.14 This latest review of the SHLAA builds on the results of the original SHLAA (and previous updates), which took account of a considerable amount of information relating to potential housing sites within the Borough. This included a range of databases and GIS datasets that contained important information that has helped to assess the deliverability and developability of sites, including site constraints. The following sources of information were either used as part of the original SHLAA and/or subsequent reviews:
- **Housing Land Availability Schedule (HLA – 1st April 2007)** – This contained a list of all sites within the Borough with planning permission, both full and outline. It detailed the number of completions on each of these sites, the number of units under construction and how many units have yet to be commenced. The database contained a lot of information relating to specific sites including constraints and opportunities. In addition to sites with planning permission, the HLA also included a list of remaining sites that are allocated for residential development in the Bury UDP that did not benefit from a current planning consent. Effectively the HLA is now encompassed within the SHLAA;
 - **Annual Housing Completions monitoring** – Annual monitoring can be used to assess the performance of housing development and growth in the Borough in recent years. It includes an assessment of the net number of units completed, the tenure, type and size of these completions, and whether they are on brownfield or greenfield land. This provides relevant information on the recent pattern of housing development within the Borough and this information was used to help make assumptions around certain aspects of the SHLAA findings (e.g. windfall allowance);
 - **Local Plan Authority's Monitoring Report(s)** – These contain a lot of the same information that is collated by the annual housing completions monitoring but also include additional information such as the housing trajectory.
 - **Acolaid Database** – This is the database that the Council uses to retain the information relating to all planning applications. This was used to provide an update of all planning approvals that contained an element of residential use. It was also used to identify recent planning applications that were refused, so that they could be assessed to determine whether there was potential for residential use if policy changes or constraints on the sites were lifted. The system also contains information on sites where pre-application discussions have taken place. These 'pre-application' files were assessed within the SHLAA but because of

commercial sensitivities, some sites have not been able to be specifically identified within the findings and are treated as confidential in the analysis.

- **Urban Potential Study (UPS - 2004)** – This was a comprehensive assessment of potential housing sites that was carried out in line with the North West Regional Assembly’s methodology (2003). This methodology is similar to the previous methodology published by the CLG and the current advice in the NPPG. This database formed an important part of the desktop exercise at this and other stages of the SHLAA methodology.
- **Employment Land Review (ELR – various updates)** – The original ELR work was undertaken alongside the SHLAA and provided an assessment of all employment sites within the Borough (including those allocated specifically for particular employment uses and those employment sites that are unallocated and dispersed throughout the Borough). The findings of the ELR have helped to identify employment land that could have the potential to accommodate residential development. Employment land sites that are identified as no longer being suitable for continued employment use in land use terms and are vacant/un-used have been identified in the SHLAA as Category 4 sites. Employment sites that are still in use but are considered to have some potential (either as wholly residential sites or as part of a mixed use development) are identified as Category 5 sites. Those employment sites that are considered to be best retained for employment have been discounted (Category 7 sites). It should be noted that planning applications for residential use on employment sites would still need to be assessed against planning policy that seeks to protect such land.
- **Derelict Land Survey (2005)** – This survey identified all the derelict sites across the Borough and the SHLAA sought to identify any of these that had potential for housing (that were not already covered in the NLUD or elsewhere). The SHLAA also used the survey data to help provide additional information on sites that were already identified.
- **Contaminated Land Strategy (2003)** – The Urban Potential Study was supported by the results of this work but further information has been/is being added to the contaminated land database. The updated contaminated land research has been used to help identify whether identified sites within the SHLAA are potentially contaminated.
- **Greenspace Audit and Strategy (2015)** - This work is a comprehensive review of all recreation land and general open space within the Borough, whether allocated for such uses or not. It also assesses the long-term requirements in terms of quantity, quality and accessibility of the various types of open space, sport and recreation for future provision in meeting local need where appropriate, through establishing minimum standards to be achieved. This work will help identify if any potential recreation sites and/or open spaces are surplus to requirements or of such a poor quality that would warrant their potential release for residential use.
- **Town, District, Local & Neighbourhood Centres** - These surveys are carried out every year on a rolling programme (e.g. Town and District centres one year and local and neighbourhood centres another year) and provide information on occupancy and vacancy of retail buildings in the Borough. These continuous surveys help to provide information on the potential use of vacant and/or underused upper floors for residential

purposes. It is difficult to identify the potential from such sites, particularly on a site specific basis, but such potential help support the SHLAA's conservative allowances for small windfalls.

- **Retail Database** – This provides a list of planning permissions and remaining allocations for retail use. This was analysed but there was not considered to be any potential from these sites at this time. This database will be monitored to determine whether such sites could become available when the SHLAA is updated. This is particularly pertinent giving the views from Government that vacant retail floor space should be released for housing.
- **Site Specific Development Briefs** – The Council currently has several regeneration priorities, which are concentrated in and around the town centres of Bury, Radcliffe and Prestwich. Briefs and masterplans have either already been drawn up or are in the process of being drawn up to help promote the regeneration efforts in these areas. These have provided information on the potential for housing developments as part of the regeneration efforts and have helped to identify issues associated with bringing sites forward and timescales.
- **Empty Property Register** – There are generally low levels of voids within the Borough, particularly when compared with other districts in the region. Analysis of the current Empty Property Register did not identify any pockets where voids were a particular problem or identified any potential for clearance programmes/redevelopment opportunities. This will be reviewed on an annual basis in the updates of the SHLAA.
- **Stock Condition Survey** – Similarly, a stock condition survey of private sector housing has been undertaken but it has not identified any pockets of private sector housing that were a particular problem that would warrant intervention or clearance programmes. Future SHLAA's will continue to consider this aspect of information.
- **Ordnance Survey Maps** – The Council has a quality ordnance survey based GIS that has been used to help identify potential vacant sites throughout the Borough from local knowledge.
- **Aerial Photography (2016)** – The Council has recent aerial photography that forms part of the GIS and the databases that sit behind it. Again, this has helped to identify potential sites for residential use.
- **Strategic Flood Risk Assessment (2008)** – The results of the SFRA have been taken on board as part of the SHLAA update. This work has formed an important source of information to identify constraints on the potential of housing growth in areas prone to flooding and how these constraints might be mitigated for.
- **Council's Property Assets** – The Planning Team have worked closely with other Council services, including Property and Development Services, to help identify potential sites within the SHLAA. There are certain sensitivities around some of the sites identified and some have not therefore been made explicit within the SHLAA at this stage. This is similar to the sensitivities associated with sites that have been identified at the pre-application stage. The Council has taken forward several Council owned sites for residential development in recent years and there is a portfolio of other sites that will be released in the coming months and years.

- 3.15 It is clear that there is already quite a lot of information that is/was contained in the various datasets that either existed or have evolved since the initial SHLAA was undertaken. This has helped to give a comprehensive assessment of potential sites for residential development.

C. Call for Sites/Broad Locations

- 3.16 The 2021 SHLAA is effectively an update of previous versions of the SHLAA and stakeholders have played an important role in identifying potential sites and influencing many of the assumptions contained in the SHLAA. These stakeholders include a range of community groups, government departments, neighbouring local authorities, housebuilders, the HBF and landowners, amongst others.
- 3.17 These stakeholders are invited to comment on the results of the SHLAA and to put forward any new sites that they consider could be brought forward for housing. Such comments and site suggestions can be submitted to the Council at any time throughout the year.
- 3.18 A form is available for stakeholders, including members of the public, to provide the relevant information needed to allow the Council to assess sites being suggested. All sites that are suggested to the Council are assessed as part of the annual update of the SHLAA.
- 3.19 The Council undertook a comprehensive 'Site Suggestion Exercise' as part of the previous attempts to get an up to date Local Plan in 2007 and landowners and land promoters put forward a significant number of sites that fed into the SHLAA updates. This exercise invited all stakeholders on the Local Plan database and the public at large to put forward proposals on whether sites should be either protected or developed for other purposes. A more recent Call for Sites was also carried out as part of the August 2017 Local Plan key issues and policy framework consultation.
- 3.20 A call for sites exercise has also been carried out as part of the preparation of the Greater Manchester Spatial Framework. Local residents, businesses, land owners and developers have been invited to identify sites they think could be suitable for housing or employment development. Sites submitted for housing have fed into the SHLAA update.
- 3.21 The expertise and knowledge of stakeholders has been utilised and stakeholders have been able to give their views on the availability and deliverability of sites contained within the SHLAA. Bury's SHLAA is therefore considered to have been produced with full and continued involvement with appropriate partners and has been prepared in an open and transparent way to help it form a robust and credible part of the evidence base for the Local Plan.

D. Site / Broad Location Survey

- 3.22 The SHLAA survey has been carried out internally as sufficient expertise exists within the Council to identify potential housing sites through existing databases and local knowledge. Officers have undertaken a detailed survey of all of the sites within the SHLAA against national policies and designations to establish which sites and locations have a reasonable potential for development.

3.23 The survey work sought to:

- bring together all the information available to enable Officers to assess the potential of each site;
- ratify any inconsistent information that was gathered through the call for sites process and the desktop survey;
- update information on each site, including those with planning permission;
- identify the most appropriate type and scale of development for each site;
- consider high level deliverability issues on each site, including how identified barriers could be overcome; and
- identify additional sites that had not been identified from other sources.

3.24 For each site the survey work identified:

- the site size, boundaries and location;
- the current land use and character;
- the land use and character of surrounding uses;
- any physical constraints on a site (e.g. access, contamination, steep slopes, flooding, natural features of significance, location of infrastructure/utilities);
- potential environmental constraints;
- development progress (where applicable); and
- whether the site is considered to be suitable for a particular type of development or as part of a mixed use development.

3.25 The survey work is held within an Access database connected to the Council's GIS system. Sites will be continuously reviewed and the information within the SHLAA database will be formally updated on an annual basis, with a base date a base of 1 April through to 31 March. This annual review will determine if there have been any changes in the sites identified (e.g. if a site has been granted planning permission or if a site has started development). As well as being reported in the SHLAA and associated documents, the results will also be included in the Authorities Monitoring Report for the Local Plan, which will include details on the housing trajectory taken from the SHLAA.

3.26 The SHLAA database collates all the relevant information needed to assess the potential of sites, associated constraints and particular opportunities within the sites. Much of this information on sites has already been obtained from work undertaken on the SHLAA in previous years.

3.27 All sites within the SHLAA have been visited in order to get an up-to-date view on development progress, particularly where sites have planning permission, and also to identify constraints to development. The Council has undertaken a review of all of the sites within the SHLAA to help determine the sites that have potential for future housing and those that have been discounted at this stage.

Stage 2 – Sites/Broad Location Assessment

3.28 The estimation of housing potential for each site identified in the SHLAA has been guided by existing and emerging planning policy, including emerging policies on density of development. This update of the SHLAA takes account

of the proposed release of Green Belt land in the August 2021 Places for Everyone joint plan (PfE). The sites that are proposed to be released are identified but it should be noted that there is no guarantee that these will be the eventual sites included in PfE should it be adopted with or without the proposal to release Green Belt land. The SHLAA is only a 'snapshot' of sites/proposals at a particular point in time.

- 3.29 The SHLAA seeks to ensure that appropriate densities are applied to the sites, based on location, particular site circumstances, opportunities or constraints in order to determine an indicative capacity for each site. For example, a higher density may have been deemed more appropriate in the most sustainable locations, including those within the main centres and along the main public transport nodes. Conversely, densities may have been reduced on some sites due to a potential detrimental impact on a feature of the natural or built environment (e.g. listed building).
- 3.30 In line with the NPPG, the Council has also sought to balance a site's potential with examples of similar sites that have come forward in a particular area or elsewhere within the Borough, where appropriate, along with existing densities nearby.
- 3.31 The results of the SHLAA seek to provide evidence to support the Council's position in relation to the requirements of national planning guidance, in terms of both identifying a deliverable five year supply and also potential sites for the next ten years and beyond. In line with the NPPG methodology, the Council has assessed their availability, suitability and achievability of identified sites to determine if overall they can be considered to be deliverable and developable, or otherwise.
- 3.32 In order for a site to be considered within the five year requirement, the site or at least part of it, must be considered to be deliverable. The NPPF definition of deliverability requires sites to be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years. Sites with outline planning permission for major development, allocated in a development plan, permission in principle or identified on a brownfield land register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.
- 3.33 In assessing the suitability of a site for housing the Council has examined each site against;
- planning policy restrictions (local and national);
 - physical problems or limitations (e.g. access or flood risk issues);
 - potential impacts of a site being released for residential use (including potential impacts upon landscape features, nature and heritage conservation);
 - appropriateness and likely market attractiveness;
 - contribution to regeneration areas; and
 - the living conditions / amenity impacts that would be experienced by prospective residents and neighbouring areas.

- 3.34 The findings of the SHLAA have followed the NPPG guidance that considers that the sites that are allocated or have planning permission for residential use, will generally be considered suitable. However, each site has been assessed individually (including those with planning permissions and are allocated) to determine if they remain suitable since permission was granted or since they were allocated.
- 3.35 In assessing the availability of sites for housing, the Council has assessed land ownership constraints that may be associated with bringing sites forward. This has included identifying whether there are any obvious legal or ownership problems, including ransom strips or multiple ownership issues. However, it should be noted that the Council has not identified the ownership of every site within the SHLAA as this was considered too costly an exercise to do and information could quickly become outdated. It was not considered proportionate to do this.
- 3.36 Instead, the findings of the SHLAA are based on information held within various datasets and local knowledge, where available (e.g. through Acolaid from planning applications or through evidence submitted from the site suggestion exercise). The consultations on previous SHLAAs have provided a further opportunity for developers and landowners to provide information on whether the sites were available for development.
- 3.37 One of the main reasons for assessing the availability of sites is to identify whether sites are likely to come forward within a five year period (deliverability criteria). Many of the sites that have been put forward by landowners and developers suggest that sites may be available in the longer term (i.e. beyond five years). These sites have not been considered as being 'available' in the SHLAA in the sense that they would not contribute to the five year supply of deliverable sites. However, they may actually be available in the sense that they are not in use. Other sites have been put forward by landowners as being immediately available but are not currently deemed suitable (e.g. due to policy constraints).
- 3.38 In assessing the achievability for housing, the Council sought to identify whether there was a reasonable prospect that housing would be developed on particular sites/areas at a particular point in time. This part of the assessment included an analysis of the general viability of bringing sites forward, which involved looking generally at:
- market factors;
 - cost factors, including infrastructure;
 - viability issues; and
 - other delivery factors.
- 3.39 It should be noted that the Council does not have the resources to assess detailed viability of each individual site. However, the Council did undertake some high level viability work as part of its Local Plan/Core Strategy. This suggests that residential development sites in Bury are largely viable given the strength of the housing market in the Borough.
- 3.40 Each site within the SHLAA has been assessed on when residential development is likely to be 'achieved'. This assessment also relates back to policy issues at the national and local level. The results of the SHLAA indicates the amount of units that are likely to be delivered on sites/areas (or

partial sites/areas) within the short term (years 0-5, which is 2021/22 to 2025/26), medium term (years 6-10, which is 2026/27 to 2030/31) or longer term (looking up to 2037 - the proposed end date of PFE).

- 3.41 The results have also enabled the SHLAA to produce a more detailed assessment of the housing numbers that will be produced by specific sites/areas each year up to 2037. This information has been used to produce the Housing Trajectory which will be included in the Authorities Monitoring Report. The housing trajectory is broken down by the amount of housing land that is expected to be delivered on brownfield and greenfield sites.
- 3.42 Sites have only been considered to be deliverable (in terms of the five year supply) if the site is deemed to be suitable, available and achievable.
- 3.43 The guidance in NPPG suggests that the SHLAA should consider how any identified constraints could be removed to help sites to come forward. Accordingly, the SHLAA has identified possible ways in which constraints can be removed, where possible, and the Council is committed to continuing to work with appropriate agencies and stakeholders to help identify how other constraints can be overcome on sites that have development potential. It should be noted that many of the constraints identified relates to planning policies and designations (e.g. Green Belt constraints).
- 3.44 The Council has identified some broad areas where future housing will be encouraged as part of mixed use redevelopments. It is the intention to draw up masterplans in these areas to help progress their redevelopment. These include broad areas within the existing urban area (e.g. on the edges of town centres). They mainly relate to areas that have opportunities to re-engineer land uses within the area, presenting some opportunities for residential use. It should be noted that at this stage (i.e. without the benefit of detailed masterplans) a conservative number of residential units has generally been put against these area searches. Therefore, as work progresses on this front the SHLAA will be updated to take account of any increased potential from these areas (as well as any other sites coming forward).

Stage 3 – Windfall Assessment

- 3.45 Windfall sites are defined in the NPPF as “Sites not specifically identified in the development plan.”
- 3.46 The NPPF and PPG make reference to an allowance for windfalls for housing (where justified). Paragraph 70 of the NPPF states that “Where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends”.
- 3.47 Windfall sites include sites that have unexpectedly become available and have subsequently been identified as having potential. Local authorities have traditionally made ‘allowances’ for windfall sites when demonstrating the supply of land in their areas, to reflect the fact that sites continually come forward despite not being specifically allocated in the local development plan or being identified as part of the supply within supply studies, such as the SHLAA. These allowances are generally based on the average number of

completions on windfalls sites over a number of years, allowing for fluctuations.

- 3.48 For the purpose of this report, windfall sites are considered to be sites that are not specifically identified as part of the housing land supply (i.e Category 1-4) within the SHLAA. The Council considers that such sites will continue to come forward over the plan period.
- 3.49 In particular, the Council considers that it is appropriate to make an allowance for small windfalls coming forward as it is difficult to identify small sites that have potential for residential development. Another source of new housing may come from surplus recreation land in the Borough. The Council has carried out a review of all recreation land and general open space within the Borough. This has identified a surplus of some typologies of open space in some areas, and also sites that fail to meet minimum quality standards. Some sites may be released for housing in order to secure funding to improve recreation facilities elsewhere or on part of a site.
- 3.50 Historical analysis of recent completions indicates that windfalls continue to come forward on small sites. Findings of the windfall assessment are set out in Section 5 of this report.

Stage 4 – Assessment Review

- 3.51 The findings of the SHLAA are set out in Section 5 of this Summary Report, identifying the level of housing that could potentially be delivered over the coming years. The findings will feed in to the emerging Greater Manchester Spatial Framework and Bury Local Plan.

Stage 5 – Final Evidence Base

- 3.52 Section 6 provides a summary of the results of the SHLAA, including a trajectory of anticipated delivery. Additional details are then provided on each site identifying (amongst other key outputs):
- a list of all sites and broad locations assessed;
 - a plan showing the location of these sites;
 - a detailed assessment of each site (including their suitability, availability and achievability);
 - an assessment of when sites are likely to come forward;
 - details of why sites have either been deemed suitable or discounted;
 - the potential type and quantity of development that could be delivered on each site;
 - the envisaged build out rates for each site; and
 - any barriers to site delivery and setting out how these may be overcome.

4 Findings

- 4.1 The sites within the SHLAA are split into different categories depending on their planning status and their assessment within the SHLAA. There are six different categories in total as follows:
- Category 1 – Sites under construction;
 - Category 2 – Sites with extant planning permissions (full and outline);
 - Category 3 – Housing Allocations;
 - Category 4 – Unconstrained potential;
 - Category 5 – Constrained potential;
 - Category 6 – Proposed Site Allocations (as identified in the Publication Places for Everyone August 2021 and
 - Category 7 – Discounted Sites.
- 4.2 All sites and broad locations are placed within one of the above categories and the assessment then determines how many homes are likely to be delivered on each site (if any) and when. This information then feeds into the housing trajectory to determine the short and long term housing potential across the Borough.
- 4.3 The tables below identify which period each SHLAA site is expected to start to deliver housing. Please note that some of the larger sites will deliver housing numbers in more than one period. The Housing Trajectory in Section 7 considers the envisaged annual completion rates on all SHLAA sites.

Category 1 – Sites Under Construction

- 4.4 As stated, sites that are given a category 1 status are those sites that have received planning permission and a material start has been made on the implementation of that planning permission. Within this category there will be sites at various different stages in the construction process from sites that are nearing completion to sites that are just commencing ground works.
- 4.5 As with all the different categories, these findings are based on the position at the 1 April 2022 and some of these sites may have been completed since then or additional sites may have commenced. These changes will be picked up in the comprehensive yearly review of the SHLAA.
- 4.6 The summary table of each of the categories identifies the number of sites within that category, the total site area and the number of units that are available on them. It also identifies the availability of the sites within the three timeframes. However, it should be noted that most large sites will be identified as coming forward within one timeframe but will also contribute to the housing numbers in other timeframes. The number of dwellings is based on when completions are likely to take place.

Table 1 – Category 1 – Sites under construction

Availability	Number of Sites	Site Area	Available and Under Construction
0 – 5 years	63	38.48	836
6 – 10 years	3	0.44	9
11 - 15 years	0	0.00	0
15+ years	1*	1.62	0
Total	67	40.54	845

* Site ref. HL/0219/00 – Eagle Bleachworks, is identified as Category 1 because it has an extant planning permission for 144 dwellings because a material start was made, but the development is not expected to progress within the plan period and the site has therefore been assigned a capacity of 0 dwellings.

- 4.7 The figures in Table 1 show that there were 845 units available on 67 sites that were under construction at 1 April 2022. Of these, 318 units (38%) were actually under construction with the remaining 527 yet to start on these sites.

Category 2 – Sites with an Extant Planning Permission

- 4.8 Category 2 sites are those sites that had an extant planning permission for residential development, including outline and full permission, at 1 April 2022. Some of these sites may have progressed to Category 1 status since then and any change in status will be taken into account in the next annual review.

Table 2 – Category 2 – Sites with planning permission

Availability	Number of Sites*	Site Area	Available
0 – 5 years	93	43.30	449
6 – 10 years	1	0.11	486
11 - 15 years	0	0.00	20
15+ years	0	0.00	0
Total	94	43.40	955

* Please note that sites are categorised on the basis on when they are likely to first deliver housing but that the delivery of some sites will span more than one 5-year period. The number of dwellings is based on when individual completions are likely to occur.

- 4.9 The figures in Table 3 show that 94 sites had an extant planning permission at 1 April 2022 with the ability to deliver 955 units (net) over the plan period.

Category 3 – Housing Allocations

- 4.10 Category 3 sites are those sites that have been specifically allocated for residential purposes within the Bury Unitary Development Plan 1997 (UDP). Most of the sites allocated in the UDP have already come forward and there are only five remaining that have not come forward for various reasons.

Table 3 – Category 3 – Housing Allocations

Availability	Number of Sites	Site Area	Available
0 – 5 years	0	0.00	0
6 – 10 years	1	0.51	10
11 – 15 years	2	2.54	63
15+ years	1	0.28	0
Total	4	3.32	73

- 4.11 The figures in Table 4 show that there is a potential 73 units that could be accommodated on the remaining housing allocations in the UDP. These have been assessed as being sites that are likely to come forward in the medium to long term in the plan period but they all have the potential to be delivered in the short term if brought forward. Site, ref. HL/0289/01 – land to rear of Church Lane, Prestwich is no longer expected to come forward for residential development and has therefore been assigned a capacity of 0 dwellings.

Category 4 – Unconstrained Potential

- 4.12 Category 4 sites are those sites that have been identified as being suitable for residential development in the future but do not as yet have any current planning commitments (i.e. do not have an extant planning permission or are allocated for residential use). Please note that the term 'unconstrained' relates to the sites general suitability rather than deliverability. Therefore, some of the sites in this category may have some development constraints that will need to be considered and resolved before they can receive planning permission and be developed.

Table 4 – Category 4 – Unconstrained potential

Availability	Number of Sites*	Site Area	Available
0 – 5 years	15	14.10	391
6 – 10 years	54	27.00	1,606
11 – 15 years	15	9.56	622
15+ years	0	0.00	0
Total	84	50.66	2,619

* Please note that sites are categorised on the basis on when they are likely to first deliver housing but that the delivery of some sites will span more than one 5-year period

- 4.13 The figures in Table 5 show that there is considerable housing potential for around 2,619 units on 84 sites. These sites have been identified as coming forward at various points of the Local Plan period but there would be no policy restrictions on preventing these coming forward in the short term.
- 4.14 The figures above include two sites totalling 80 dwellings which are also within the Joint Places for Everyone site allocation capacities, so although they are included in the totals above, they are excluded from the PfE existing land supply evidence.

Category 5 – Constrained Potential

- 4.15 Category 5 sites are those sites that have been identified as having some potential to deliver housing but are currently constrained (e.g. have physical or planning policy constraints). As above, the term 'constrained' relates to the sites suitability rather than the sites deliverability. Table 6 identifies the potential from these sites if the identified in-principle constraints could be removed.
- 4.16 Many of the sites in this category are employment sites that have been put forward by landowners but have been identified as being suitable for continued employment use in the Employment Land Review (unlike the employment sites identified in category 4, which are no longer deemed suitable). Some of these sites may deliver housing over the plan period, if some of the constraints can be removed (e.g. if large employment sites are redeveloped as mixed use developments incorporating an element of residential).

Table 5 – Category 5 – Constrained potential

Availability	Number of Sites	Site Area	Available
Total	103	79.41	2,669

- 4.17 The figures in Table 6 show that the potential from constrained sites is considerable. However, whilst some of these sites may come forward as 'windfalls' over the plan period, some are likely to remain in their current use.

Category 6 – Proposed Places for Everyone Site Allocations

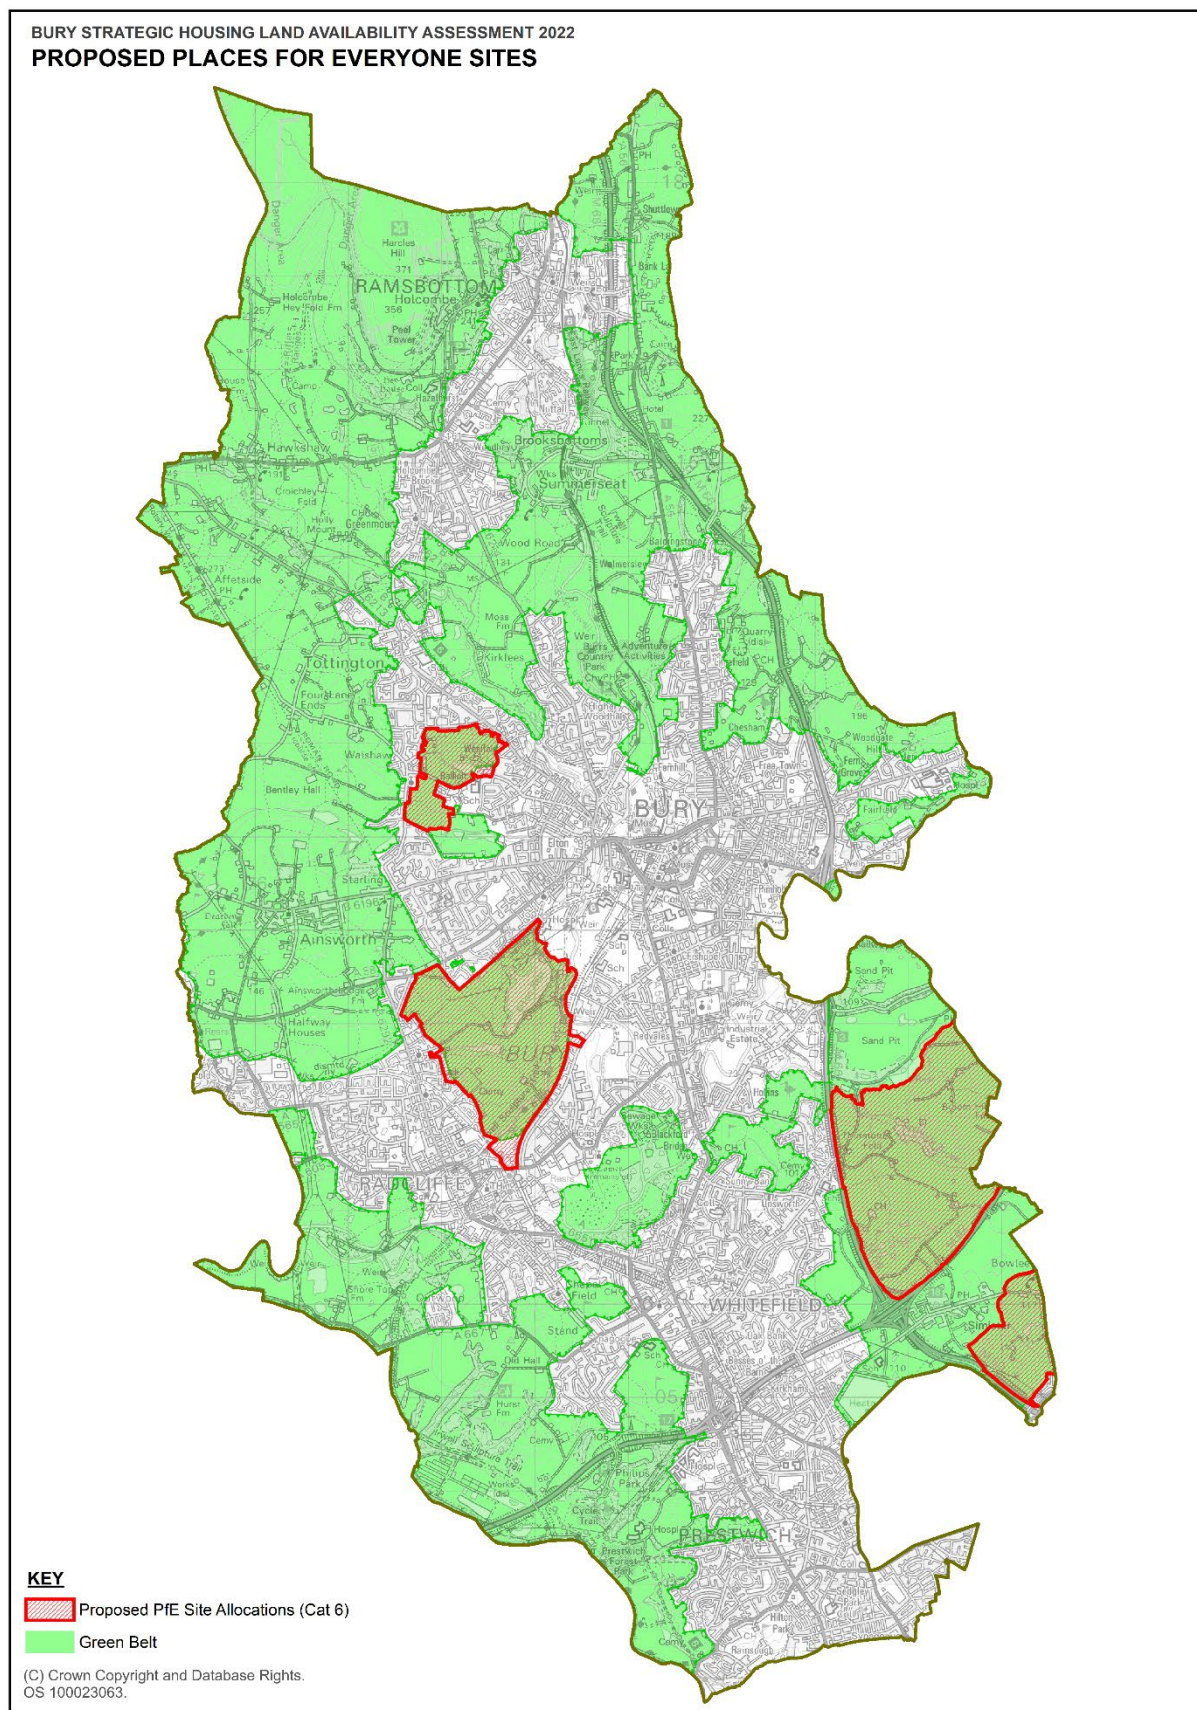

- 4.18 Category 6 sites are those sites that have been identified in the submitted Places for Everyone Joint Development plan as allocations for residential development, or mixed use development incorporating an element of housing.

Table 6 – Category 6 – Proposed PfE allocations

Availability	Number of Sites	Site Area	Available
Total	4	719.34	6,300

- 4.19 One site which is identified as an allocation with the PfE Joint plan, ref. HL/2518/00 - Seedfield has been included in Category 4 of the housing supply for 140 dwellings, and is therefore not counted in the totals above, because although it is in the Green Belt a large part of the site is previously developed and is considered to have potential for redevelopment outside of the PfE preparation process.
- 4.20 The figures in Table 7 show that in addition to the Seedfield allocation, there is potential on four other proposed PfE site allocations to accommodate 6,300 dwellings. However, at this stage these sites are proposed allocations and have not been through an examination.
- 4.21 It is anticipated that not all of the dwellings on the Elton Reservoir allocation would be delivered within the PfE plan period of 2021-2037. In addition to 140 at Seedfield, around 4,700 dwellings are anticipated to be delivered within Bury on proposed PfE site allocations within the plan period, with a further 1,600 completed after 2037.
- 4.22 Figure 2 shows the location of the potential Places for Everyone site allocations (excluding Seedfield).

Figure 2: Potential Places for Everyone Site Allocations

Category 7 – Discounted Sites

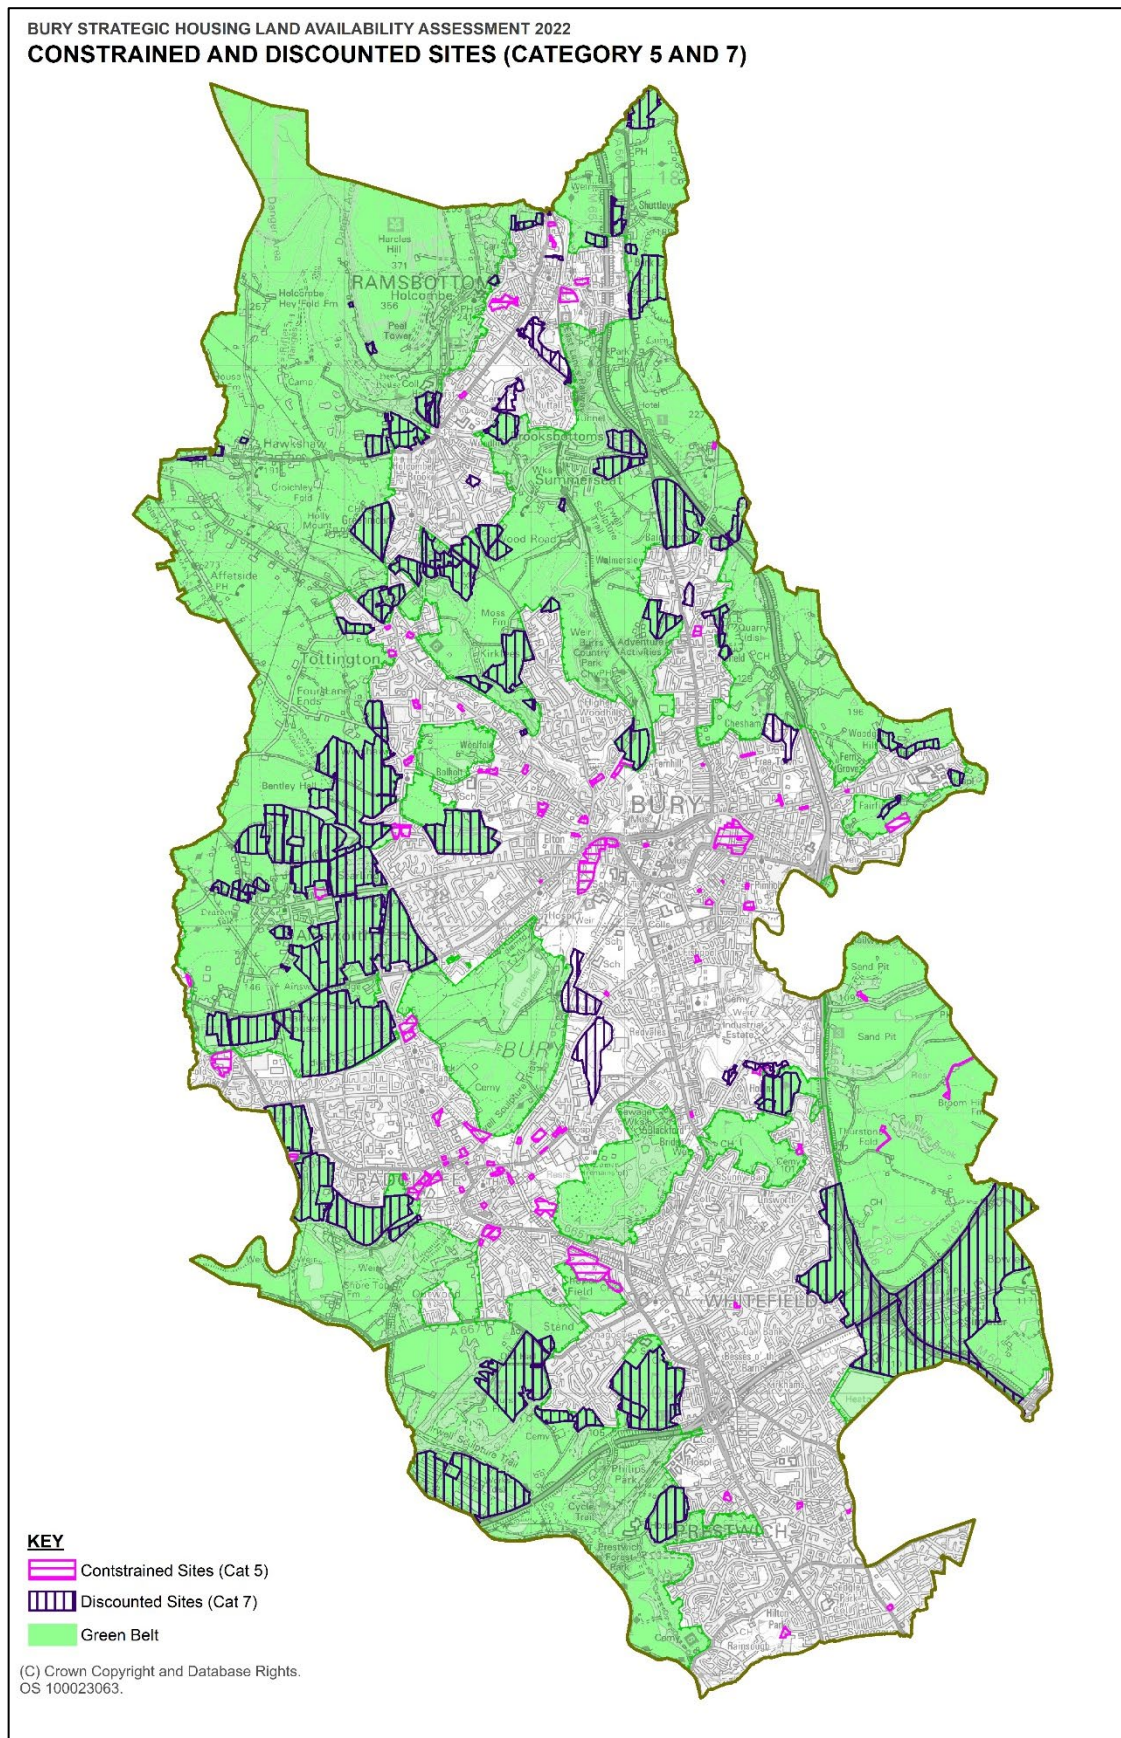

- 4.23 Category 7 sites are those sites that were assessed as part of the SHLAA but are not considered to be suitable for housing at this time because of site and/or planning policy constraints (e.g. some sites are large greenfield sites in unsustainable locations in the Green Belt). Some of these sites may contribute to housing over the plan period if the issues that warranted their discounted status can be removed (e.g. if very special circumstances can be demonstrated on a Green Belt site).

Table 7 – Category 7 – Discounted sites

Availability	Number of Sites	Site Area	Capacity
Total	111	1,177.40	27,633

- 4.24 The figures in Table 7 show that there is potential on 108 discounted sites to accommodate around 27,633 units. However, at this time these sites are not considered to be suitable for residential development given the existing constraints on the sites. Reviews of the SHLAA will continue to assess the longer term potential of Category 7 sites as Planning Policy evolves, site circumstances change or if there are changes at in terms of the sub-regional approach to delivering housing. Appendix 4 gives a brief outline of why the Category 7 sites have been discounted.
- 4.25 Figure 3 shows the location of the constrained and discounted sites (Category 5 and Category 7).

Figure 3: Constrained and Discounted Sites

5 Windfall Allowances

- 5.1 Windfall sites are defined in the NPPF as “Sites not specifically identified in the development plan”. Local authorities have traditionally made ‘allowances’ for windfall sites when demonstrating the supply of land in their areas, to reflect the fact that sites continually come forward despite not being specifically allocated in the local development plan or being identified as part of the supply within supply studies, such as the SHLAA. These allowances are generally based on the average number of completions on windfalls sites over a number of years, allowing for fluctuations.
- 5.2 The NPPF states that local planning authorities may make such an allowance for windfalls if there is compelling evidence that such sites will provide a reliable source of supply. It goes on to state that any allowance should be realistic having regard to the SHLAA, historic windfall delivery rates and expected future trends.
- 5.3 The Council considers that sites that have not been specifically identified in the SHLAA as having potential to deliver housing will continue to come forward through the plan period. The NPPF also states that local planning authorities to support the development of windfall sites through their policies and decisions, giving great weight to the benefits of using suitable sites within existing settlements for homes. It is therefore likely that windfall sites will continue to play an important role in meeting future housing need in Bury. As such, the Council intends to make an appropriate allowance for windfalls coming forward over the plan period in line with the NPPF.

Windfall allowance for small sites

- 5.4 The Council considers that it is particularly difficult to identify which small sites are likely to come forward over the plan period and for these sites to be specifically identified in the SHLAA. The Council does not have the resources to identify and assess every parcel of land which may have potential for only 1 or 2 dwellings. It is envisaged that planning applications will continue to be submitted over the plan period for additional dwellings through:
- the subdivision of existing dwellings;
 - flats over existing shops;
 - the intensification of existing residential areas (e.g. developments in garage colonies); and
 - other small housing sites coming forward.
- 5.5 There is no nationally set methodology for establishing what an appropriate small sites windfall allowance would be and no set definition of what would constitute a small site. Analysis has been carried out applying a threshold of less than 5 dwellings, as sites of this scale are the hardest to identify.

Table 8 – Small sites completions – completions on sites less than 5 dwellings

Year	Gross	Net
2017/18	39	31
2018/19	31	29
2019/20	39	34
2020/21	48	36
2021/22	41	35
TOTAL	198	165
Average	40	33

- 5.6 There are no reasons to suggest that there will not continue to be a significant contribution to housing delivery made by smaller sites that have not specifically been identified as being suitable in the SHLAA due to the size of the site.
- 5.7 It is considered appropriate to apply a small sites allowance from 2027/28 onwards. Many small sites that are likely to come forward earlier will already have planning permission and so will be included within the SHLAA. Although it is likely that additional small windfall sites will come forward within the next five years, a conservative approach has been taken to apply the windfall allowance from year 6 (2027/28).
- 5.8 The figures presented in Table 9 are based on total past completion rates. It is therefore appropriate to deduct any small sites that are currently included within the SHLAA from the allowance to avoid double counting. The results of this approach are set out in Table 9.

Table 9 - Small sites windfall allowance

Year	Small sites annual average past takeup	Small sites SHLAA supply	Small sites allowance
2027/28	33	18	15
2028/29	33	17	16
2029/30	33	5	28
2030/31	33	2	31
2031/32	33	0	33
2032/33	33	4	29
2033/34	33	1	32
2034/35	33	1	32
2035/36	33	0	33
2036/37	33	0	33
Total	330	48	282

- 5.9 The small sites windfall allowance varies slightly from year to year, based on how many dwellings within the existing supply are deducted.

Large Windfall Sites

- 5.10 Larger sites are easier to identify than small sites and the SHLAA identifies a number of large sites that have potential to deliver housing in the short, medium and longer term. These range from sites that have already got planning permission or are currently under construction to those larger sites that are still in use but are likely to become available over the plan period.
- 5.11 Nevertheless, it is important to note that the SHLAA is only a snapshot picture of potential sites at a particular point in time. The assumptions used in the assessment can change over time, including changes to national, sub-regional or local planning guidance. The availability of sites can also change over relatively short periods of time and large sites that were not considered to have any potential can quickly become available due to unforeseen circumstances.
- 5.12 Therefore the Council considers that, in addition to small sites, it is likely that large sites will also come forward for residential development over the plan period that have not specifically been identified as being suitable in the SHLAA. This may include sites that are currently identified as having constrained potential or discounted sites, which may be considered suitable for residential use if the identified constraints can be overcome.
- 5.13 The SHLAA has identified several large sites (1 hectare or above) that are currently considered to be constrained and as such have not been considered suitable for residential use at this time (Category 5 - constrained potential). Several of these sites are employment sites that are deemed to be suitable for continued employment use. The constraints on some of these sites may be resolved over the plan period, which may allow some of these sites to deliver housing over the plan period. For example, it may be acceptable for certain large employment sites to be redeveloped through a mixed use scheme which incorporates an element of residential use, as well as employment use.
- 5.14 In addition, there are a number of businesses currently located in older premises or where they have no room to expand, who may choose to relocate to more suitable modern premises. The allocation of land for employment within PfE will create opportunities for these businesses to relocate thereby freeing up less suitable employment sites for residential redevelopment.

Dwelling Losses

- 5.15 It is considered that windfall allowances should also take account of historic losses of dwellings in areas and future clearance programmes. In terms of trend data, Table 10 gives a breakdown of net dwelling losses in each of the last five years (this includes demolitions and the loss of dwellings to other uses).

Table 10 - Dwelling losses

Year	Total
2017/18	8
2018/19	2
2019/20	5
2020/21	12
2021/22	6
TOTAL	33
Average	7

- 5.16 There has not been a great deal of clearance activity in Bury when compared with clearance programmes in other local authorities across the region. All of the dwelling losses above were on small sites of less than 5 dwellings, and have therefore been taken into account in using a net past trend figure to calculate the small sites windfall allowance. There are no plans for further comprehensive clearance programmes in the Borough given the relatively good condition of the existing housing stock but it is acknowledged that there may be some small scale clearance programmes over the plan period.

Local windfall allowance

- 5.17 Whilst the Council believes that windfall sites will continue to come forward each year over the plan period, it is not proposed that a windfall allowance is made for the next five years of the plan period (i.e. no allowance is proposed for years 2022/23 to 2026/27). Whilst sites are likely to come forward and secure planning permission over this five year period, they may not deliver housing straight away. The housing trajectory, therefore, assumes that housing from windfalls (i.e. sites that are not currently identified in categories 1-4) will start to deliver housing in 2027/28.
- 5.18 Based on historical windfall trends and the likelihood of these continuing, the Council makes a conservative windfall allowance of a total of 282 units from 2027/28 to 2036/37. This is based on small sites. No specific allowance has been made for large windfalls at this time, due to the difficulty of establishing what would constitute an appropriate allowance, although these are likely to continue to come forward. This may include sites that are currently identified as category 5 and 7 (as evidence shows some of the sites that have been identified in these categories have subsequently come forward) as well as sites that have not been identified at all within the SHLAA.

6 Summary of Findings

- 6.1 In total, there were 243 sites within categories 1 to 4¹ providing potential for 4,492 residential units. Table 11 sets out the summary of these categories along with the windfall allowance. Category 5 and 7 sites are not shown on the summary table as they are either constrained or discounted. Category 6 Places for Everyone proposed site allocations are not included as they dependent on the outcome of the independent Examination of the plan.

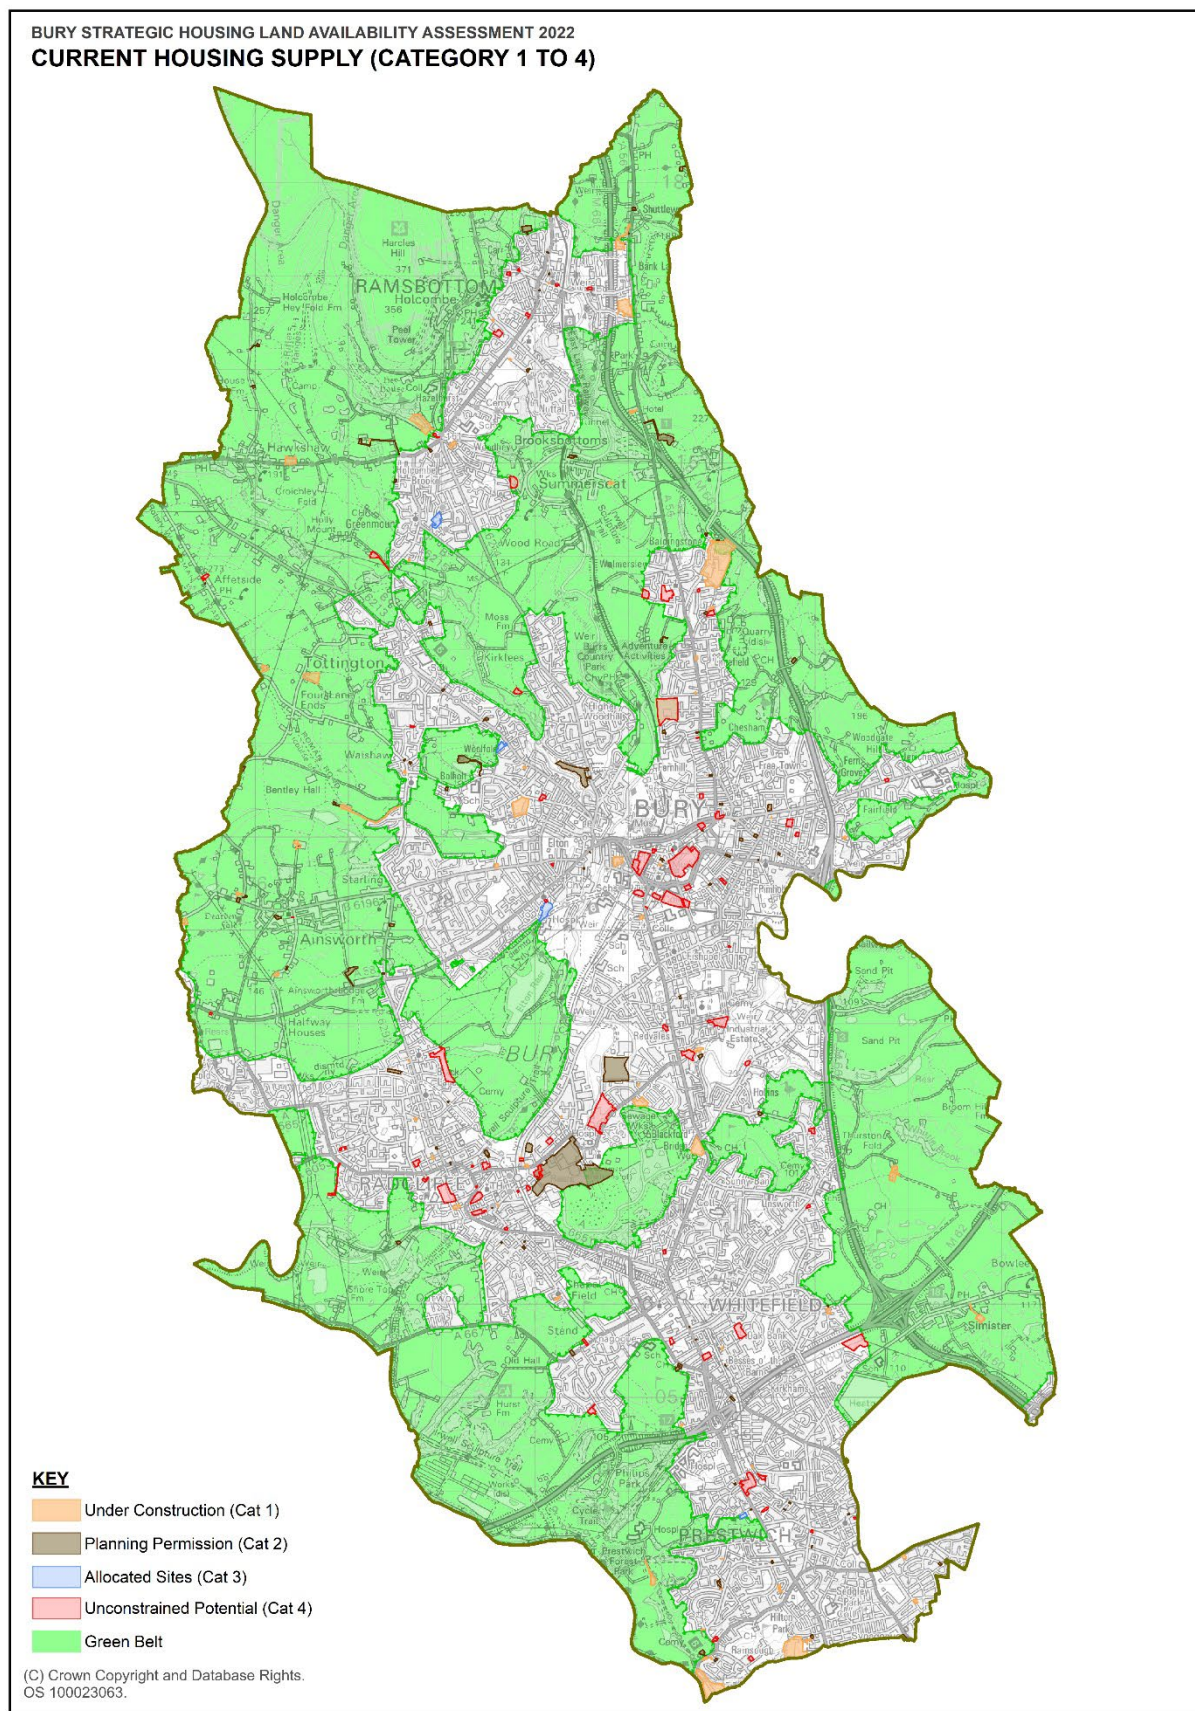

Table 81 – Summary of findings

Source of Supply /Potential	2022-2027	2027-2032	2032-2037	TOTAL
Units on sites Under Construction	836	9	0	845
Units on sites with Planning Permission	449	486	20	955
Outstanding Allocations	0	10	63	73
Unconstrained Potential	391	1,606	622	2,619
Windfall Allowance	0	123	159	282
Total Number of Potential Units Identified in the SHLAA	1,676	2,234	864	4,774

- 6.2 The results of the SHLAA show that there is considerable potential for a significant amount of residential development within the Borough between now and the end of the plan period (i.e. 15 years up to March 2037). There is the potential to accommodate 4,492 units on 243 identified sites across the Borough, with a further conservative estimate of 282 units to come forward on unidentified windfall sites over the plan period.
- 6.3 Figure 4 shows the location of all of the sites included in the current housing land supply.

¹ Excludes 2 sites that are within Categories 1-4 that are not expected to deliver any housing in the next 15 years.

Figure 4: Current Housing Supply

7 Analysis of Findings

- 7.1 This section of the summary report provides some information on house completions in recent years and examines the envisaged completion rates up to 2036/37 (i.e. over the PfE plan period). It also sets out the broad locations where identified sites are located and illustrates how these relate to the new Township Forums.

Recent Completions

- 7.2 Figure 5 provides information on the number of housing completions (net) since the adoption of the Bury Unitary Development Plan in 1997/98 to 2021/22.

Figure 5: Net completions in Bury

- 7.3 The figures in Figure 5 show that there was a net gain of 9,090 units over the past 25 years, equating to an average annual completion rate of 364 dwellings. This average has been somewhat skewed by the above average completion rates in the three years 2002/03 and 2004/05 to 2005/06, where there were 2,261 net completions, equating to an average of 754 dwellings per annum. The high completion rates in these years reflected the peak of the housing market and the redevelopment of some of the Borough's redundant large employment sites.
- 7.4 The average completion rate in the past five years has been 274 dwellings per annum.

Housing Trajectory

- 7.5 The SHLAA database provides a detailed assessment of the amount of housing that each site is expected to deliver on an annual basis up to March 2037. This is quite a difficult exercise considering the timeframes involved and the uncertainty around the availability / deliverability of many of the sites, together with the dynamics of the development industry. Sites that are either currently under construction or have an extant planning permission are

much easier to make yearly completion assumptions on compared to sites that may be identified as becoming available towards the end of the plan period.

- 7.6 Nevertheless, the Housing Trajectory provides a good illustration of the expected annual completion rates up to 2036/37.

Figure 6 – Housing trajectory

- 7.7 The trajectory illustrates that there is expected to be an increase in the annual average completion rate over the next five years (2022/23 to 2026/27) with 1,676 completions over this period compared to 1,369 over the past 5 years. This equates to an annual average of 335 over the next five years and primarily reflects the assumed delivery of sites that are either currently under construction or have an extant planning permission (with detailed permission for major developments), together with other identified sites where there is clear evidence that they will come forward within the next five years. The other identified sites that are expected to come forward within the next five years are largely sites that secured planning permission after 31 March 2022 and sites which are being brought forward as part of the Council's [brownfield housing delivery programme](#).
- 7.8 The NPPF definition of 'deliverable' within five years states that sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years. This definition has been strictly applied to sites within the first five years, however it is likely that some of the sites that have been identified from year 6 onwards could come forward sooner (i.e. within the next five years).
- 7.9 The trajectory indicates that a further 3,098 units are expected to be delivered from 2027 to 2037, including 282 windfalls. These units are expected to be delivered on large sites that already have planning permission together with those sites that are identified as being suitable for residential development (i.e. category 4 sites).

Previously Developed Land

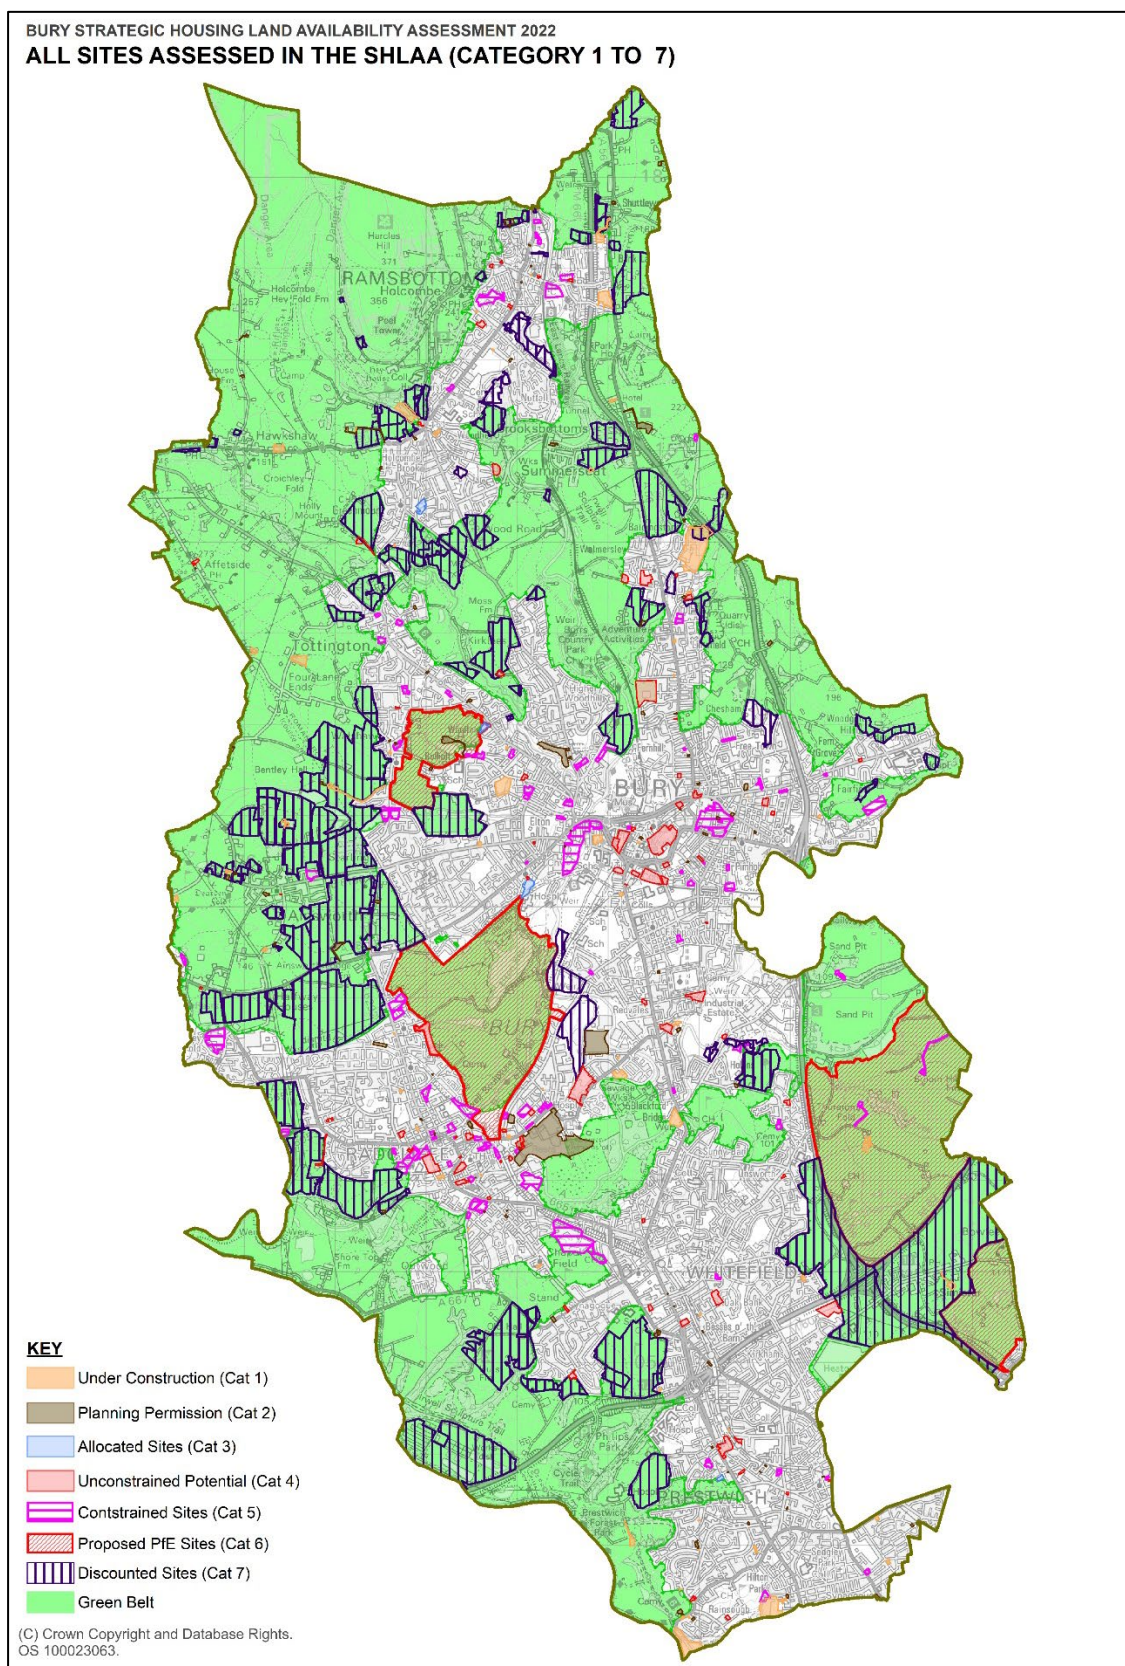

- 7.10 The housing trajectory also shows that the identified housing supply over the plan period is previously developed land.
- 7.11 The findings show that there are 243 sites identified within the SHLAA housing supply, which have a capacity to provide for 4,492 dwellings. 4,049 or 90% of these are on previously developed land. Only 443 units, or 10% of the housing land supply is on previously undeveloped land (please note this excludes any potential future PfE Allocations identified as Category 6).

Location of SHLAA Sites

- 7.12 Figure 7 sets out the location of every site identified within the SHLAA, including those sites that are considered to be constrained and discounted.
- 7.13 It is clear to see that the vast majority of sites in the categories 1 to 4 are located within the urban area. The plan shows that there is a particularly heavy concentration of potential housing sites in and around the inner areas of both Radcliffe and Bury. The majority of category 5 sites are also within the urban area.
- 7.14 The proposed Places for Everyone Site Allocations are located in the Green Belt around Bury and Radcliffe and around Junction 18 of the M60/M62 and to the east of the M66.

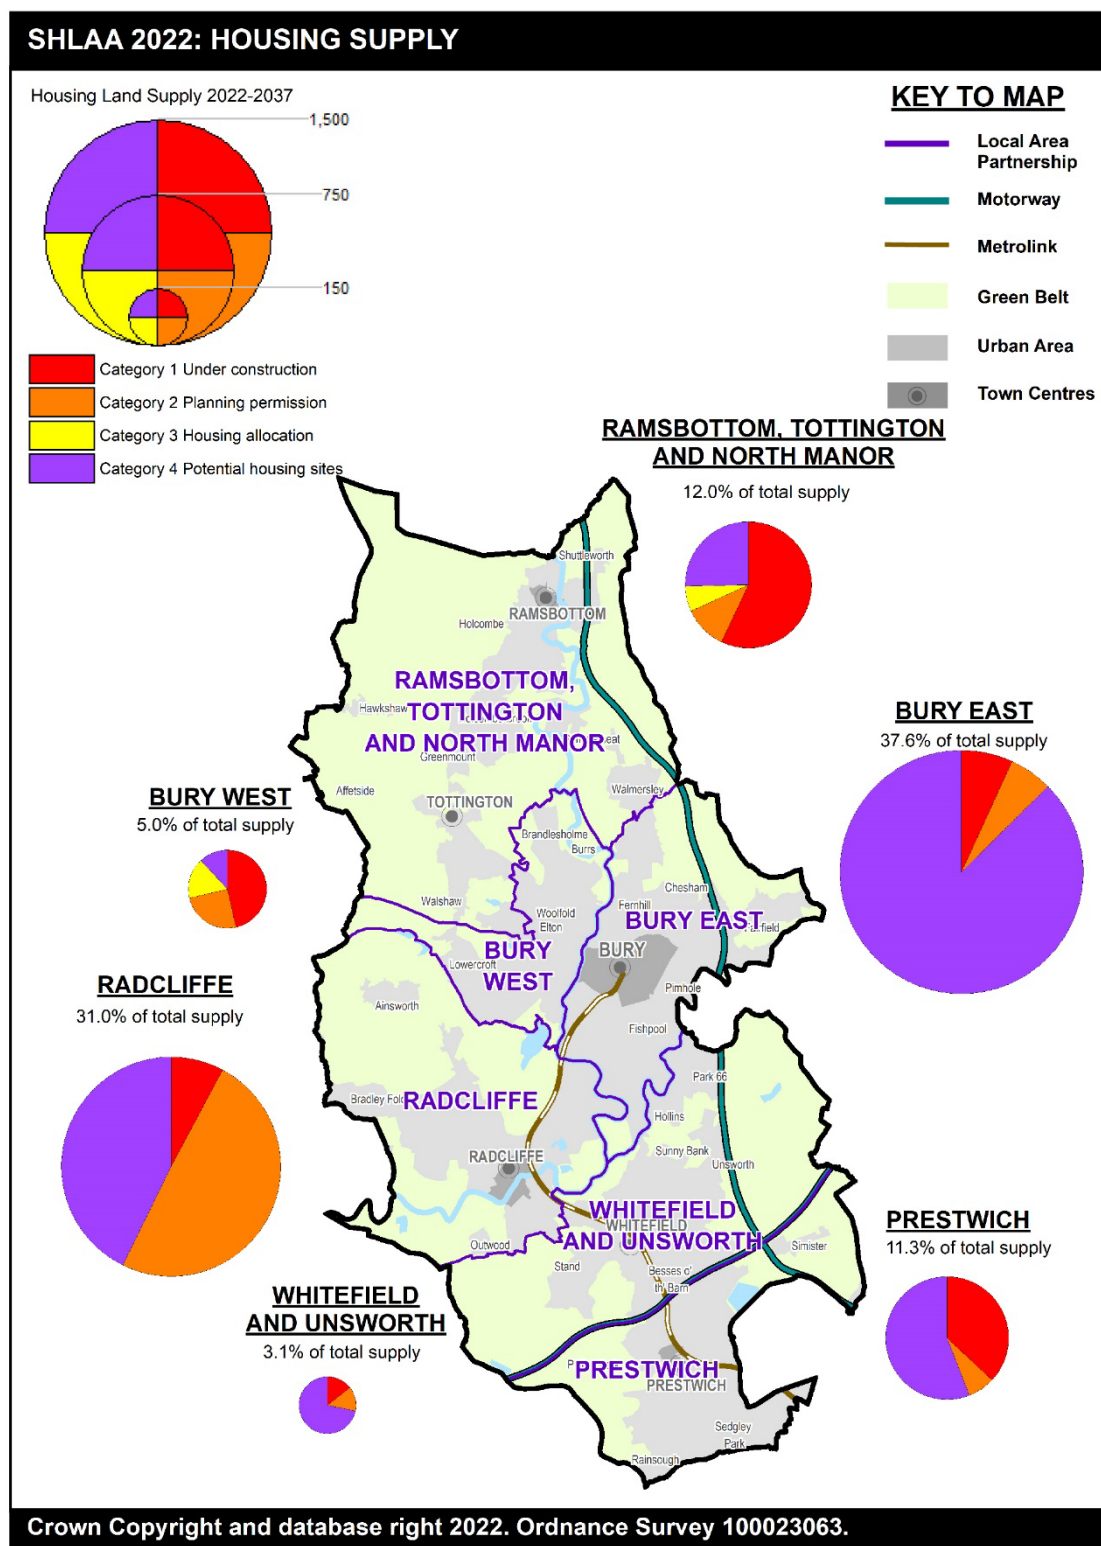

7.15 The majority of sites that have been discounted in the SHLAA (Category 7) are located outside the urban area, mainly within the Green Belt. There is a particularly heavy concentration of discounted sites in the Green Belt area running from Ainsworth up to Walshaw.

Figure 7: Location of all sites assessed in the 2022 SHLAA

7.16 Figure 8 identifies how the identified supply translates across each of the Borough's six townships.

Figure 8 – Split of SHLAA sites between townships

7.17 It is apparent that the main concentration of both committed and potential housing sites are located within Bury (42.6%) and Radcliffe (31.0%), equating to 73.6% of the total supply. 12.0% of the housing supply is in the north of the Borough, in Ramsbottom, Tottington and North Manor. 14.4%

of the Borough's housing over the plan period is envisaged to be delivered in the south of the Borough, in Prestwich and Whitefield.

- 7.18 Table 12 shows the actual number of dwellings that can be accommodated in each of the six townships, as indicated in Figure 8.

Table 9 – Housing supply 2022-2037 split by area

Township	Category 1 Under construction	Category 2 Planning Permission	Category 3 Outstanding UDP Allocation	Category 4 Unconstrained Potential	Total
Ramsbottom, Tottington and North Manor	308	60	35	137	540
Bury West	105	56	38	27	226
Bury East	115	96	0	1,476	1,687
Radcliffe	109	688	0	596	1,393
Whitefield and Unsworth	20	19	0	99	138
Prestwich	188	36	0	284	508
Total	845	955	73	2,619	4,492

- 7.19 Please note that the above figures do not include an allowance for windfalls. Given the nature of windfalls, it is difficult to predict where they will be located.

8 Conclusion

- 8.1 This summary document provides a snapshot picture of both the committed and potential housing supply in the Borough up to 2036/37 at 1 April 2022. The results of the SHLAA will primarily be used to help inform work on Places for Everyone and the Bury Local Plan. In particular, it will play an important role in providing robust and credible evidence to support the proposed housing target for the Borough.
- 8.2 The sites and areas that have been identified in the SHLAA database are derived from a number of sources and are reviewed on an annual basis. The SHLAA has been carried out in full accordance with the NPPG.
- 8.3 There will be continuous opportunities for stakeholders to be involved in the SHLAA, providing additional information on sites or suggesting new sites as the SHLAA is rolled forward year on year. Certain assumptions have been made within the assessment based on current policy and guidance and Officer's professional judgement at a certain point at time. However, as the SHLAA is a 'living document', the information and assumptions are subject to change over short periods of time, as sites move from one category to another, or as circumstances change on sites and as new sites come forward, for example.
- 8.4 Planning applications for residential development will continue to be assessed on their individual planning merits in accordance with the development plan and other material planning considerations. Information that is contained within the SHLAA may act as a useful indication of opportunities or constraints on a site but applicants will still need to undertake their own detailed research to determine the full potential for residential development opportunities on sites within the SHLAA or indeed those that have not been identified.
- 8.5 It is clear from the findings in Section 4 and the analysis in Section 7 that there is potential for a considerable amount of residential development on previously developed sites within the urban area. In total, 243 sites have been identified as having potential to deliver 4,492 housing units. An allowance for an additional 282 windfall units from 2027/28 to 2036/37 has been made to take account of the potential from small sites that have been unable to be identified at this stage.
- 8.6 The SHLAA also identified 103 category 5 sites that had the potential to provide for 2,669 units if they were able to overcome the identified constraints. A further 4 sites within the Green Belt were identified as proposed PfE Site Allocations (excluding Seedfield which has been counted within the potential supply in paragraph 8.5) with the potential to deliver 6,300 dwellings in total (4,700 up to 2037), however at this stage these sites are only proposed allocations and are dependent on the outcomes of the Examination of the Places for Everyone plan. An additional 111 sites were assessed in the SHLAA but were discounted because of the constraints that existed on the sites. These had the potential to deliver 27,633 units and includes a number of large sites within the Green Belt.
- 8.7 These results will help form part of the Council's evidence base to support the Council's position in relation to the requirements of national planning guidance, in terms of both identifying a deliverable five-year supply to cover

the next five years of the plan period and also identifying potential housing sites for the period beyond this (to cover the period of Bury's Local Plan).

- 8.8 The full SHLAA report, including details of all the sites, is available to view on the Council's website.
- 8.9 Appendix 2 provides some brief details of all the sites that have been assessed as part of the SHLAA. Appendix 3 provides a summary of the reasons why the Council considers the Category 5 sites to be constrained. Appendix 4 provides a summary of the 4 Category 6 sites identified as potential site allocations. Appendix 5 provides a summary of the reasons why the Council considers that Category 7 sites should be discounted.

Appendix 1 – Glossary of Site Information in SHLAA

For those wishing to view the SHLAA Report in more detail it is available to view online at www.bury.gov.uk/11050. Each of the sites assessed are clearly mapped out within this folder and more detail is provided on the sites, including information relating to its location and identifiable constraints. Those wishing to view the detailed SHLAA folder may find the following Glossary useful to help understand the information that is presented on each site.

Site Details

Field	Description
Site Reference	Each site is given a unique Housing Land (HL) reference number.
Category	Each site is given a category depending on where the site is at within the planning process as follows: Cat 1 – Sites under construction Cat 2 – Sites with an Extant Planning Permission Cat 3 – Sites Allocated for Housing Cat 4 – Unconstrained Potential (sites considered suitable for residential use) Cat 5 – Constrained Potential (sites where residential use is considered unsuitable unless the constraints can be overcome) Cat 6 – Proposed Places for Everyone Allocations (sites identified in the submitted Places for Everyone (August 2021) as allocations for residential development or mixed use incorporating an element of housing) Cat 7 – Discounted Potential (primarily undeveloped Green Belt sites where there are significant planning constraints that are likely to prevent sites from coming forward over plan period)
Site Location	Address of the site in question
District	Each site is identified on the basis of the particular district that it is located. The sub-districts are Ramsbottom, Tottington, Bury North, Bury South, Radcliffe, Whitefield and Prestwich.
Existing Use	The existing planning land use of the site (such as residential, employment, retail etc)
Surrounding Use	The predominant land uses surrounding the site
Land Use Class	The land use categories are as follows: BU – Brownfield Urban BNU – Brownfield Non-Urban GU – Greenfield Urban GNU – Greenfield Non-Urban MU – Mixed Urban MNU – Mixed Non-Urban U/K – Unknown
Site Area (ha)	The size of the site measured in hectares
Density	This is calculated on the number of dwellings per hectare (based on the estimated net site area).

Field	Description
Previously Developed?	Whether the site is previously developed or not (i.e. Greenfield or brownfield)
Windfall Site?	<p>Whether the site is a windfall site (i.e. the site has not been allocated for identified for residential development through the Local Plan).</p> <p>No – Site is a housing allocation Y-S – Site is a small windfall site (<0.39) Y-M – Site is a medium windfall site (0.4 – 0.99 ha) Y-L – Site is a large windfall site (>1 ha)</p>
Capacity	<p>Number of units that the site can accommodate.</p> <p>The Council has identified the number of units available on sites within categories 1 and 2 based on information submitted as part of the relevant planning application.</p> <p>Sites and areas identified in categories 3 and 4 have been assessed to determine the potential housing that could be accommodated in them, taking on board information available at the time, such as location and the likely density of developments.</p> <p>Sites and areas in categories 5 and 7 have simply been attributed a density of 30 dwellings per hectare to determine their potential capacity unless other information was available. However, the net developable area may be much smaller on some of these sites and the capacity of the sites may be reduced considerably even if the sites came forward.</p> <p>Please note the capacity estimates in categories 3 to 7 are for indicative purposes only and the actual number of units developed on a site may go up or down.</p>

Application Details (where applicable)

Field	Description
Application Number	The planning application number. In the event that there is more than 1 approval on the site the Council has used the latest approval or if in Category 1, the approval that is being implemented.
Description	Site description of what the planning approval is for.
Planning Status	This lists any planning status that is associated with a site (such as full / outline planning permission, expired permission, allocation or none).
Permission Date	Date when planning permission was granted
Expiry Date	Date when planning permission expires. Planning permissions normally last for a period of 3 years after

Field	Description
	which they lapse unless a material start has been made on implementing the permission.
Application Name & Address	Details of the applicant who submitted the planning application
Owner Details & Address	Details of the land owner (s) where known. Please note that this information is based on information held by the Planning Authority and may not be fully accurate as land ownership can change on a regular basis. It is suggested that the Land Registry is contacted for more accurate and up-to-date details of land ownership.
Developer Details / Agent Details and address	Details of the planning agent (if one used). Sometimes developers are known and these have been input into the database.

Site Details (where applicable)

Field	Description
House Type Details	Details of the house types where full or detailed planning permission has been granted.
Bedroom Details	Details of the dwelling size (measured by number of bedrooms) where full or detailed planning permission has been granted.
Tenure Details	Details of the house tenure of dwellings on sites where full or detailed planning permission has been granted.
Plot Details	Lists the number of units that are available on the site. This should be the same as the capacity field but is split down to sites that are actually built on a site, those that are currently under construction and those that remain to be started on sites. Only sites in Category 1 will have sites that are built or under construction.
New Build / Conversions	On sites that have planning permission there will be details on whether the dwellings are to be new build or conversions / change of use to residential.
Affordable Housing Units	Identification of affordable housing units secured through the planning process, normally by means of a S106 agreement.

Deliverability Details (5 Year Supply)

Field	Description
Suitable	<p>Each site has been assessed to determine its suitability for residential development. This included a general assessment against:</p> <ul style="list-style-type: none"> • planning policy restrictions; • physical problems or limitations; • potential impacts of a site being released for residential use; and • the living conditions that would be experienced by prospective residents. <p>On the summary sheet, sites are either given a Yes, No or Unsure response to the suitability assessment.</p>
Available	<p>Each site was assessed to determine if the site was immediately available for residential development or was due to become available. This included a general assessment of whether sites are being brought forward by landowners and developers for short term development. On the summary sheet, sites are either given a Yes, No or D/K (Don't know) response to the availability assessment.</p>
Achievable	<p>This was an assessment of whether there was a reasonable prospect of sites being delivered within a five year period. An informed judgement was made regarding the achievability of each site based on a general analysis of housing market conditions and potential cost issues with bringing certain sites forward. The assessment also included an assessment of whether the site is likely to be viable to deliver. On the summary sheet, sites are either given a Yes, No or D/K (Don't know) response to the achievability assessment.</p>
Deliverable	<p>Only sites that were considered to be suitable, available and achievable were considered to be deliverable and contributed to the five year supply of land for housing. In line with the NPPF, sites that are not major development, and sites with detailed planning permission, are considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years. Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register are only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.</p> <p>It should be noted that the circumstances that can affect the deliverability of sites can change quite quickly (e.g. if a site that was previously unavailable becomes available and is put forward for development). There will be regular updates of the SHLAA to identify any change in circumstances that</p>

Field	Description
	could affect the deliverability of a site or other associated information.
Timeframe for Development	<p>Each site is split into a timeframe of when it is expected to come forward. These timescales are for indicative purposes only and sites may come forward sooner or later than expected.</p> <p>Short term: 0 – 5 years Medium term: 6 – 10 years Long term: 11 -15 years</p> <p>It should be noted that for some sites, particularly large housing sites, the units may be considered to be delivered over two or more timeframes.</p>
Deliverability Comments	This is a general comments field with comments on whether sites are considered to be deliverable or whether they may be suitable for residential use in the longer term.

Constraint Details

On the summary sheets, general constraints are identified and are either given an N (no), Y (yes) or U (unknown) based on this desktop exercise. It should be noted that these results should be treated for indicative purposes only and more detail analysis should be taken by users of the SHLAA to determine if constraints exist (e.g. for the purposes of a planning application). For example, just because the assessment says 'No' under the contamination constraint, it does not mean that there are no contaminants on the site.

Field	Description
Contamination	This was a desktop exercise which assessed the potential for contamination. Use was made of the contaminated land survey to help identify whether any of the sites identified in the SHLAA were potentially contaminated. Please note that all sites that overlapped sites with potential contamination, even if this was only a slight encroachment, were identified as having potential contaminants.
Hazardous	This was assessed in much the same way as sites for potential contaminants were done. A desktop exercise helped to give an informed indication of whether potential hazardous substances existed on a site. Use was made of a 175m buffer strip around such sites to determine whether there was any hazardous risk. More detailed research would be required to give a more accurate position and the results (like the rest of the SHLAA) should only be treated as indicative.
Nature Conservation	Each site was assessed on the potential impact releasing a site for residential use would have on nature conservation. This related to things like impact on mature trees (TPOs) and other vegetation.

Field	Description
Built Heritage	Each site was assessed on any potential impact releasing a site for residential use would have on the Built Heritage. This relates to things like impact on Listed Buildings or conservation areas.
Flood Risk	Each site was assessed against its location in relation to whether there was a flood risk associated with the site in terms of fluvial flood risk. The level of risk has also been identified depending on whether all or part of a site is within flood zone 2 or 3. This is a major constraint to the release of sites for housing development under national planning policy.
Bad Neighbour	Each site was assessed to determine if a site was suitable for residential use in relation to neighbouring uses. This was to help determine the living conditions of future occupiers to help assess general suitability and also to assess the impact that introducing residential use into certain areas may have (e.g. introducing residential use into an area of employment may restrict the types of activity that can take place there to the detriment of employment opportunities).
Poor Access	<p>This was a general assessment of each sites vehicular access. Again it should be noted that the findings are only indicative and more detailed analysis of access arrangements would be needed to satisfy Highway Engineers for the purposes of a planning application.</p> <p>As the SHLAA evolves, it is the Council's intention to work closely with the Highways Agency to ensure that future housing development does not impact on the operation of the Strategic Road Network and roads that may impact on the M60 and M66 corridors.</p>
Negative Ecology	Each site was assessed against any potential impact releasing a site for residential use would have on Ecology. This relates to things like the potential impact on protected species or Sites of Biological Importance. Sites were generally considered harmful if they intersected across SBIs, SSSIs and/or Local Nature Reserves
Negative Air Quality	Each site was assessed against any potential impact releasing a site for residential use would have on the quality of the local air.
Competing Uses	This was a general assessment looking at the availability of sites to help determine whether there were other more appropriate uses for each site or where the site could accommodate other uses. For example, sites might be in employment use and it may be more appropriate to continue that use.
Pylons	This was a simple assessment to determine if there was an overhead Pylon or a Pylon within the boundary of the site.

Field	Description
Levels	This was a general assessment of the ground conditions of each site, which could have an impact on the deliverability of sites.
Planning Constraints	This was a general assessment of current planning policy constraints and how this could affect the sites short term and long term prospects of delivering housing.
Multiple Ownership	This was a general assessment of the number of owners on sites as this can sometimes prevent sites from coming forward. Again, it is important to note that the SHLAA used information that was available to Officers at the time and there may have been changes to ownership details / number of owners since the information was compiled.
Green Belt / OPOL / RV	This was an assessment to determine whether or not a site or part of a site is on land that is either designated as Green Belt, Other Protected Open Land or River Valley land. These are considered to be significant constraints that are likely to affect the ability of a site to deliver housing.
Constraints Comments	General comments on any constraints identified in the assessment or the identification of further constraints on the site.
Constraint Solutions	This is a general comment field on how any identified development constraints may be overcome.
General Comments	This is a general comments field for any additional important information that has not been covered elsewhere.

Appendix 2 – SHLAA Schedule of Sites

Category 1: Under construction

Site ref.	Site Location	Township	Source of Supply	Gross Site Area	Anticipated density	Anticipated units remaining	Availability
HL/0219/00	Eagle Bleachworks, Manchester Road, Blackford Bridge, Bury	WHITEFIELD AND UNSWORTH	Other	1.624	89	0	15 Years +
HL/1708/01	The Manor House, Fletcher Fold, Bury	BURY EAST	Planning Application	0.316	50	1	0 - 5 Years
HL/1997/00	Adj 2 Barnhill Drive, Prestwich	PRESTWICH	Planning Permission	0.155	6	1	0 - 5 Years
HL/2004/00	11 Bury Road, Radcliffe	RADCLIFFE	Planning Application	0.044	182	8	0 - 5 Years

Category 1 Summary:

Availability	Number of Sites	Total Site Area	Total available and under construction
0-5 years	63	38.48	836
6-10 years	3	0.44	9
11-15 years	0	0.00	0
15+ years	1	1.62	0
Total	67	40.54	845

Please note that the summary figures above applies the total capacity of each site to the time period that it is expected to commence (regardless of whether sites will deliver housing over more than one timeframe). This is different to the summary tables in the main body of the report, which relate to when the units on each site will be delivered, according to the housing trajectory.

Category 2 Summary:

Availability	Number of Sites	Total Site Area	Total available and under construction
0-5 years	93	43.30	936
6-10 years	1	0.11	19
11-15 years	0	0.00	0
15+ years	0	0.00	0
Total	94	43.40	955

Please note that the summary figures above applies the total capacity of each site to the time period that it is expected to commence (regardless of whether sites will deliver housing over more than one timeframe). This is different to the summary tables in the main body of the report, which relate to when the units on each site will be delivered, according to the housing trajectory.

Category 3: Unitary Development Plan Allocations

Site ref.	Site Location	Township	Source of Supply	Site Area	Anticipated density	Anticipated capacity	Availability
HL/0289/01	Land to the rear 35 - 39 Church Lane, Prestwich	PRESTWICH	Other	0.275	0	0	15 Years +
HL/0414/00	Land off Buller Street, Deardens Fold, Bury	BURY WEST	Other	1.458	35	28	11 - 15 Years
HL/1172/00	Rear of Nailers Green Hotel, Old Green Farm, Greenmount, Tottington	RAMSBOTTOM, TOTTINGTON AND NORTH MANOR	Other	1.077	35	35	11 - 15 Years
HL/1581/00	Land west of 457 Tottington Road, Elton, Bury	BURY WEST	Other	0.509	20	10	6 - 10 Years

Category 3 Summary:

Availability	Number of Sites	Total Site Area	Total available and under construction
0-5 years	0	0.00	0
6-10 years	1	0.51	10
11-15 years	2	2.54	63
15+ years	1	0.28	0
Total	4	3.32	73

Please note that the summary figures above applies the total capacity of each site to the time period that it is expected to commence (regardless of whether sites will deliver housing over more than one timeframe). This is different to the summary tables in the main body of the report, which relate to when the units on each site will be delivered, according to the housing trajectory. The total figures tally with the figures in the main report.

Category 4 Summary:

Availability	Number of Sites	Total Site Area	Total available and under construction
0-5 years	15	14.10	549
6-10 years	54	27.00	1,596
11-15 years	15	9.56	474
15+ years	0	0.00	0
Total	84	50.66	2,619

Please note that the summary figures above applies the total capacity of each site to the time period that it is expected to commence (regardless of whether sites will deliver housing over more than one timeframe). This is different to the summary tables in the main body of the report, which relate to when the units on each site will be delivered, according to the housing trajectory. The total figures tally with the figures in the main report.

Category 5: Constrained Potential

HL/3181/00	North Block, Radcliffe	RADCLIFFE	Other	0.239	335	80

Category 5 Summary:

Availability	Number of Sites	Total Site Area	Total available and under construction
Total	103	79.41	2,669

Category 6: Proposed Site Allocation

Site ref.	Site Location	Township	Source of Supply	Site Area	Anticipated density	Anticipated capacity
HL/2847/00	Proposed Places for Everyone Site Allocation - Elton Reservoir Area	RADCLIFFE	GMSF C4S 2015/16	251.663	38	3500
HL/2848/00	Proposed Places for Everyone Site Allocation - Walshaw	RAMSBOTTOM, TOTTINGTON AND NORTH MANOR	GMSF C4S 2015/16	63.588	19	1250
HL/2900/01	Proposed Places for Everyone Site Allocation - Heywood and Pilsworth (Northern Gateway)	WHITEFIELD AND UNSWORTH	GMSF C4S 2015/16	330.286	20	200
HL/2900/02	Proposed Places for Everyone Site Allocation - Simister and Bowlee (Northern Gateway)	PRESTWICH	GMSF C4S 2015/16	73.802	39	1350

In addition to the above sites, Site ref. HL/2518/00 - Seedfield is also proposed for allocation through the Places for Everyone Joint Development Plan but has been included within Category 4 for 140 dwellings because although it is in the Green Belt a large part of the site is previously developed and is considered to have potential for redevelopment outside of the PFE preparation process.

Category 6 Summary:
